The Birds World Nicolae Sfetcu, 2021-10-25 Birds are among the most extensively studied of all animal groups Hundreds of academic journals and thousands of scientists are devoted to bird research while amateur enthusiasts called birdwatchers or more commonly birders probably number in the millions Birds are categorised as a biological class Aves The earliest known species of this class is *Archaeopteryx lithographica* from the Late Jurassic period According to the most recent consensus Aves and a sister group the order Crocodilia together form a group of unnamed rank the Archosauria Phylogenetically Aves is usually defined as all descendants of the most recent common ancestor of modern birds or of a specific modern bird species like *Passer domesticus* and *Archaeopteryx* Modern phylogenies place birds in the dinosaur clade Theropoda Modern birds are divided into two superorders the Paleognathae mostly flightless birds like ostriches and the wildly diverse Neognathae containing all other birds

Vegetation history B. Huntley, T. Webb III, 2012-12-06 The analysis of vegetation history is one of the prime objectives for vegetation scientists In order to understand the recent composition of local floras and plant communities a second knowledge of species composition during recent millennia is essential With the present concern over climate changes due to human activities an understanding of past vegetation distribution becomes even more important since the correlation between climate and vegetation can often be used to predict possible impacts to crops and forests I was very fortunate to receive the help of Drs Webb and Huntley to compile this volume on vegetation history They have collated an impressive set of papers which together give an account of the vegetation history of most of the continents during the late Tertiary and Quaternary periods There are however gaps in the coverage achieved most notably Africa and Asia apart from Japan The information in this book will nonetheless certainly be used widely by vegetation scientists for the regions covered in the book and much of it has relevance to the areas not explicitly described The authors of the individual chapters have done their best to cover recent topics of interest as well as established facts It is intended that a separate volume will be produced in the near future covering the vegetation history of Africa and Asia I thank the editors of It fits well into this volume for their commendable achievement

Faulting, Fracturing and Igneous Intrusion in the Earth's Crust David Healy, 2012 Geologists have long grappled with understanding the mechanical origins of rock deformation Stress regimes control the nucleation growth and reactivation of faults and fractures induce seismic activity affect the transport of magma and modulate structural permeability thereby influencing the redistribution of hydrothermal and hydrocarbon fluids Experimentalists endeavour to recreate deformation structures observed in nature under controlled stress conditions Earth scientists studying earthquakes will attempt to
