

ALIGNMENT OF CUTTER BAR

Fig. 26

For proper operation the outer end of the cutter bar should lead the inner end when the machine is not in operation. After long use the outer end may lag

Fig. 27

back and if this happens it can be corrected by making adjustments on the cutter bar eccentric bushing as follows:—First make sure that the pin and bolt in the hinge connection "A" Figs. 27 and 28 are tight and in good condition. Set the machine on a level floor or ground and block up the front end of the tongue so the distance from the underside of the tongue to the floor is from 13 to 15". See Fig. 26. Place a straight edge or draw a string along the front side of the axle, extending the full length of the cutter bar, measure the distance from the straight edge or string to the front edge of the cutter bar. The measurement at the inner end of the bar should be 4 to 4-3/4" greater than the measurement at the outer end on a 7' bar.

If the cutter bar does not have this amount of lead, adjustment should be made on the eccentric bushing; remove the bolt "B" Fig. 27, holding the keeper plate in place. Then by using this plate as a wrench turn the eccentric bushing either to the right or left until the cutter bar has the proper lead. Then replace the bolt and plate.
