## **New Perspectives In Histamine Research Agents And Actions Supplements:**

**New Perspectives in Histamine Research** H. Timmermann, H. van der Goot, 1991-02 Histamine is an intriguing compound the same is true for the several classes of anti histaminergic compounds The classical anti histamines now known as H antagonists have 1 been the result of intensive research in the 1950s and 1960s The new so called non sedating H1 antagonists which became available in the 1980s could be developed mainly due to insights into structural features causing the sedating effects of the older compounds In the 1970s the H2 receptors became important targets for developing new anti ulcer agents The H2 antagonist story is a stimulating example of modern research on pharmacology and medicinal chemistry Unknown and new properties of histamine and histaminergic systems came to the attention of the pharmacologists and medicinal chemists in the 1980s The role of histamine as a neurotransmitter the existence of a presynaptic receptor H controlling the release of histamine 3 and other neurotransmitters and the particular character of this receptor became important as the possibilities to design new therapeutic agents were realized Recently other roles of the histaminergic systems have been suggested Is there a distinct histamine receptor involved in immunological features of histamine Is histamine involved in the prolactin axis Are histamine receptors intracellularly present in certain cells and what is their possible role For these reasons it was the right time to discuss New Perspectives in Histamine Research during a scientific meeting Therefore a symposium was organized as a satellite of the XIth International Congress of Pharmacology of IUPHAR in Amsterdam in 1990

Serotonin: Molecular Biology, Receptors and Functional Effects FOZARD, SAXENA, 2012-12-06 The Second IUPHAR Satellite Meeting on Serotonin was held under the auspices of the Serotonin Club in Basel Switzerland in July 1990 The scope was wide ranging from molecular biology through in vitro and in vivo pharmacology to new drug tools and their clinical significance There were three invited review lectures by J M Palacios D I Wallis and A Kaumann and S Peroutka gave the first Serotonin Club Irvine H Page Lecture The rest of the oral programme was put together by the Scientific Organizing Committee based on volunteered research contributions The invited review lecturers the platform speakers and selected poster contributors were invited to write up their contributions for inclusion in this volume Most complied and this book is the result of their efforts When instructing the authors prior to the meeting we emphasized that selected new data should be put in the context of the literature findings In this way we hoped to achieve topicality yet preserve the review perspective which facilitates its appreciation by the non specialist It was truly a pleasure to read the interesting papers which resulted and to prepare them for publication We believe they convey to a remarkable degree the spirit of what was generally felt to be a highly stimulating exchange of information on matters serotonergic which took place in Basel last July

The last decade has witnessed a wealth of new information on the mechanisms underlying cell signaling. Molecular approaches have revealed the identity and structure of many of the receptor proteins which permit cells to respond to different chemical signals. An important mechanism regulating receptor function is desensitization, i.e., the suppression of a cellular response induced by the continuous presence of a constant agonist stimulus. This book features selected studies on receptor-mediated desensitization in various cells and tissues triggered by Ca<sup>2+</sup>. Post-receptor mechanisms are also considered. The contributions focus on muscarinic, histamine, and adrenergic receptor systems, as well as the phosphoinositidase C signaling pathway. The authoritative information compiled in this book will not only prove of great value to researchers interested in signal transduction but is also crucial for the development of new drugs.      **Methods in Neurotransmitter and Neuropeptide Research** H.
