NIST Handbook of Mathematical Functions Frank W. J. Olver, 2010 **NIST Handbook of Mathematical Functions Paperback and CD-ROM** Frank W. J. Olver, Daniel W. Lozier, Ronald F. Boisvert, Charles W. Clark, 2010-05-17

Modern developments in theoretical and applied science depend on knowledge of the properties of mathematical functions from elementary trigonometric functions to the multitude of special functions. These functions appear whenever natural phenomena are studied, engineering problems are formulated, and numerical simulations are performed. They also crop up in statistics, financial models, and economic analysis. Using them effectively requires practitioners to have ready access to a reliable collection of their properties. This handbook results from a 10-year project conducted by the National Institute of Standards and Technology with an international group of expert authors and validators. Printed in full color, it is destined to replace its predecessor, the classic but long-outdated *Handbook of Mathematical Functions* edited by Abramowitz and Stegun. Included with every copy of the book is a CD with a searchable PDF of each chapter. Check out the news release and the video for this new book.

2014 Reprint of 1964 Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. Despite the increasing use of computers, the basic need for mathematical tables continues. Tables serve a vital role in preliminary surveys of problems before programming for machine operation, and they are indispensable to thousands of engineers and scientists without access to machines. Because of automatic computers, however, and because of recent scientific advances, a greater variety of functions and a higher accuracy of tabulation than have been available until now are required. In 1954, a conference on mathematical tables sponsored by MIT and the National Science Foundation met to discuss a modernization and extension of Jahnke and Emde's classical tables of functions. This volume, published 10 years later by the U.S. Department of Commerce, is the result. Designed to include a

maximum of information and to meet the needs of scientists in all fields it is a monumental piece of work a comprehensive and self contained summary of the mathematical functions that arise in physical and engineering problems The book contains 29 sets of tables some to as high as 20 places mathematical constants physical constants and conversion factors 6 tables exponential integral and related functions 7 error function and Fresnel integrals 12 Bessel functions of integer 12 and fractional 13 order integrals of Bessel functions 2 Struve and related functions 2 confluent hypergeometric functions 2 Coulomb wave functions 2 hypergeometric functions Jacobian elliptic and theta functions 2 elliptic integrals 9 Weierstrass elliptic and related functions parabolic cylinder functions 3 Mathieu functions 2 spheroidal wave functions 5 orthogonal polynomials 13 combinatorial analysis 9 numerical interpolation differentiation and integration 11 probability functions 11 scales of notation 6 miscellaneous functions 9 Laplace transforms 2 and others Each of these sections is prefaced by a list of related formulas and graphs differential equations series expansions special functions and other basic relations These constitute an unusually valuable reference work in themselves The prefatory material also includes an explanation of the numerical methods involved in using the tables that follow and a bibliography Numerical examples illustrate the use of each table and explain the computation of function values which lie outside its range while the editors introduction describes higher order interpolation procedures Well over 100 figures illustrate the text In all this is one of the most ambitious and useful books of its type ever published an essential aid in all scientific and engineering research problem solving experimentation and field work This low cost edition contains every page of the original government publication Preface by A V Astin Foreword by Advisory Committee Conference on Mathematical Tables Editors Introduction Indices to Subjects Notations
