

Maytag Wringer Washer Operating Guide

AGITATION

To create the desired wash action the agitator moves back and forth at 54 oscillations per minute. Agitation is accomplished through engagement of the power unit and center plate with the motor running and the agitator control knob pulled out.

With the motor running agitation is accomplished by the power unit pulley turning the worm gear (1) which turns the worm wheel, (2) rack gear, (3) connected over a slide and offset stud, (4) on the worm wheel moves back and forth on the rack shaft, (5) as the worm wheel turns.

The rack gear is engaged with and drives the power unit clutch pinion, which engages and drives the center plate clutch pinion when the shifter knob is pulled out.

Pulling the shifter knob out rotates the shifter cam (1) raising the power unit clutch pinion (2) and engaging it with the center plate clutch pinion (3) attached to the agitator shaft.

Pushing the shifter knob in rotates the shifter cam and disengages the center plate and power unit clutch pinions.

WRINGER ROLL DRIVE

Wringer drive is accomplished from the power unit through the wringer safety clutch *at the right angle. With the mechanism activated drive is completed to the wringer head, driving the lower roll.

*NOTE: The wringer safety clutch has been used on all wringer washer models manufactured since 1968. Prior to the use of the wringer safety clutch the wringer drive was accomplished directly through the right angle drive gears to the wringer head.

With the power unit operating the worm wheel shaft (1) turns the horizontal drive shaft (2) connected to the wringer safety clutch at the right angle, (3). At this point drive is not transmitted to the wringer until the wringer safety clutch is activated.
