

CYLINDER HEAD AND VALVES

Head nut tightening sequence

Cylinder Head

The cylinder head is of the conventional cast iron type. When removing the cylinder head a sharp chisel or screw driver should never be used to pry it loose from the cylinder block. The better way is to use an eyebolt in the second or third spark plug hole. Lift up on the eyebolt while tapping lightly around the edges of the head with a lead

or rawhide hammer or mallet. Be sure all cylinder head stud nuts have been removed before starting to remove the head. By following the above instructions breakage will be eliminated and the cylinder head gasket will not be ruined. In replacing the head the stud nut at the center of the head should be tightened first and then from this work towards the ends and the sides.
