Bray, Louisiana State University, Donna Ryan, 2007-02-16 Overweight and the Metabolic Syndrome will provide an overview of topics related to obesity including associated health risks childhood obesity genetics evaluation treatment behavioral strategies and successes and failures in preventing obesity The body composition that underlies obesity and the metabolic syndrome is key to understanding the problem The mechanisms by which energy balance is maintained is key to how the problem goes wrong The metabolic syndrome is in part a consequence of central fat storage but includes more issues such as insulin resistance low levels of inflammation and endothelial dysfunction This volume will cover evaluation guidelines different approaches to treatment including diet exercise behavior drugs and surgery to deal with the current world wide obesity epidemic *A Guide to Obesity and the Metabolic Syndrome* George A. Bray, 2011-03-28 In the historical record there is abundant evidence that obesity was a medical and health concern as long as medicine has been practiced The idea of diet and exercise are bulwarks in the fight against obesity in history from the time of Hippocrates to the 16th century a span of 2 000 years Examining the history and etiology of the obesity epidemic this book discusses various requirements of effective intervention and treatment strategies The first section covers the history of obesity defines and evaluates the clinical presentation of the pathology discusses its prevalence in the population and explains common analytical measurements Chapters include genetics and genetic factors modern consequences of obesity and quality of life issues The second section introduces prevention strategies in children and adults such as dietary and lifestyle changes medication and surgical interventions Handbook of Obesity Prevention Shiriki Kumanyika, Ross Brownson, 2007-09-23 Comprehensive in scope and meticulously researched Handbook of Obesity Prevention analyzes the intricate causes of this public health crisis and sets out concrete multilevel strategies for meeting it head on This innovative handbook starts by clearly defining obesity in clinical epidemiologic and financial terms From there expert contributors provide insights on current issues methods and controversies in the field focusing on new opportunities for prevention successful interventions and initiatives and guidelines for planning and implementing programs and evaluating results This systematic approach to large scale social and policy change gives all parties involved from individual practitioners to multinational corporations the tools to set and attain realistic goals based on solid evidence and best practice in public health

Gastroenterologic Issues in the Obese Patient, An Issue of Gastroenterology Clinics David A. Johnson, 2010-03-31 Given the prevalence of obesity any physician providing clinical care will be involved in the care of obese patients Gastroenterologists will play an active role in the evaluation and treatment of these patients Thereby it is essential to fully understand the scope of the problem and the opportunities for intervention The expert authors assembled for this issue offer expanded insight which can enhance care plans provided to this patient population Since Dr Johnson's first issue published there are several updates in this area and the articles in this volume address those These updates are seen in the areas of

Adrenal Related Hypertension: From Bench to Bedside, volume II Elena Aisha Azizan, Norlela Sukor, Carmela Maniero, Brasilina Caroccia, 2025-08-21 More than a third of the adult population worldwide has hypertension a key risk factor for cardiovascular diseases and death Although the majority of hypertension cases are idiopathic approximately one in six hypertensive patients have secondary hypertension whereby an identifiable condition has led to raised blood pressure Of

these 2-3% are estimated to have so called endocrine hypertension due to an imbalance of hormone production in the adrenal. Diagnosis of adrenal related endocrine hypertension is favourable as surgery and specific medical treatment are available. Despite the knowledge on adrenal related endocrine hypertension less than 1% of patients are currently diagnosed and only a handful of patients are completely cured by adrenalectomy surgery. Additionally although many mutations have been found to be causal for adrenal related endocrine hypertension e.g. KCNJ5 mutations for primary aldosteronism, SDHB mutations for pheochromocytoma and ARMC5 mutations in Macronodular Adrenal Hyperplasia the mechanisms involved are still not fully explained and there are still adrenal lesions causing endocrine hypertension where the genetic cause is still undefined.

Oxford Textbook of Anaesthesia for the Obese Patient Ashish Sinha, 2021. The Oxford Textbook of Anaesthesia for the Obese Patient is an evidence based account of clinical practice in the field. This volume describes the state of knowledge in the study of the relationships between mechanical loading states in tissues and common pathophysiologies related to increase in mass of adipose tissues and/or hyperglycemia which eventually lead to obesity, diabetes, insulin resistance, hyperlipidemia, metabolic inflammations, certain types of cancer and other related diseases. There appears to be an interaction between the loading states in tissues and cells and these chronic conditions as well as with factors such as age, gender and genetics of the individual. Bioengineering has made key contributions to this research field in providing technologies for cell biomechanics, experimentation, microscopy and image processing, tissue engineering and multi-scale multi-physics computational modeling. Topics at the frontier of this field of study include the continuous monitoring of cell growth, proliferation and differentiation in response to mechanical factors such as stiffness of the extracellular matrix (ECM) and mechanical loads transferred through the ECM, mechanically activated signaling pathways and molecular mechanisms, effects of different loading regimes and mechanical environments on differentiation fates of mesenchymal stem cells (MSCs) into myogenic and osteogenic versus adipogenic lineages, the interactions between nutrition and mechanotransduction, cell morphology, focal adhesion patterns and cytoskeletal remodeling, changes in adipogenesis, activation of receptors related to diabetes by mechanical forces, brown and white adipose plasticity and its regulation by mechanical factors. *Adipose Tissue in Health and Disease* Todd Leff, James G. Granneman, 2010-03-19. This timely and most comprehensive reference available on the topic covers all the different aspects vital in the fight against the global obesity epidemic. Following a look at adipose tissue development and morphology, the authors go on to examine its metabolic and endocrine functions and its role in disease. The final section deals with comparative and evolutionary aspects of the tissue. The result is an essential resource for cell and molecular biologists, physiologists, biochemists, pharmacologists and those working in the pharmaceutical industry. *Glucolipotoxicity and the Heart, An Issue of Heart Failure Clinics* Peter P. Toth, Vasudevan A. Raghavan, 2012-10-28. Chronic overconsumption of sugar

and fat elevates plasma levels of insulin and free fatty acids a process referred to as glucolipotoxicity This phenomenon may lead to heart failure This issue explores in depth the relationship between glucolipotoxicity and heart failure

Lipoproteins Gerhard Kostner,Indumathi Chennamesetty,2015-10-07 In mammalian blood plasma there exist some 6 major lipoprotein classes Under physiological conditions lipoproteins are certainly beneficial as they transport nutrients and steroids to numerous organs for further metabolism On the other hand under pathophysiological conditions most lipoprotein classes promote atherogenesis except of HDL that are considered to be anti atherogenic Lipoprotein research is a wide field comprising basic science analytical methods and clinical investigations Thus this issue does not raise the claim to give a comprehensive picture of the current knowledge but rather focuses on specific questions related to animal models in lipoprotein research as well as features of the most atherogenic lipoprotein Lp a
