accuracy of those measures Nonetheless this book has several recommendations aimed at further improving the price indices

Introduction to Quality and Safety Education for Nurses Carolyn Christie-McAuliffe, PhD, FNP, 2014-03-14 Print CourseSmart Best Care at Lower Cost Institute of Medicine, Committee on the Learning Health Care System in America, 2013-06-10 America's health care system has become too complex and costly to continue business as usual Best Care at Lower Cost explains that inefficiencies an overwhelming amount of data and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness According to this report the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost The costs of the system's current inefficiency underscore the urgent need for a systemwide transformation About 30 percent of health spending in 2009 roughly 750 billion was wasted on unnecessary services excessive administrative costs fraud and other problems Moreover inefficiencies cause needless suffering By one estimate roughly 75 000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state This report states that the way health care providers currently train practice and learn new information cannot keep pace with the flood of research discoveries and technological advances About 75 million Americans have more than one chronic condition requiring coordination among multiple specialists and therapies which can increase the potential for miscommunication misdiagnosis potentially conflicting interventions and dangerous drug interactions Best Care at Lower Cost emphasizes that a better use of data is a critical element of a continuously improving health system such as mobile technologies and electronic health records that offer significant potential to capture and share health data better In order for this to occur the National Coordinator for Health Information Technology IT developers and standard setting organizations should ensure that these systems are robust and interoperable Clinicians and care organizations should fully adopt these technologies and patients should be encouraged to use tools such as personal health information portals to actively engage in their care This book is a call to action that will guide health care providers administrators caregivers policy makers health professionals federal state and local government agencies private and public health organizations and educational institutions

Trisolini, Gregory C. Pope, Janet B.

Mitchell, Leslie M. Greenwald, 2011-02-28 This book provides a balanced assessment of pay for performance P4P addressing both its promise and its shortcomings P4P programs have become widespread in health care in just the past decade and have generated a great deal of enthusiasm in health policy circles and among legislators despite limited evidence of their effectiveness On a positive note this movement has developed and tested many new types of health care payment systems and has stimulated much new thinking about how to improve quality of care and reduce the costs of health care The current interest in P4P echoes earlier enthusiasms in health policy such as those for capitation and managed care in the 1990s that failed to live up to their early promise The fate of P4P is not yet certain but we can learn a number of lessons from experiences with P4P to date and ways to improve the designs of P4P programs are becoming apparent We anticipate that a second generation of P4P programs can now be developed that can have greater impact and be better integrated with other interventions to improve the quality of care and reduce costs **Principles and Practice of Public Health Surveillance**
