Ultrasound-Guided Peripheral Nerve Blocks Enzo Silvestri, Fabio Martino, Filomena Puntillo, 2018-05-24 This book offers a comprehensive but straightforward practical handbook on ultrasound US guided nerve blocks It presents the normal US anatomy of peripheral nerves clinical aspects of nerve entrapment and different procedures techniques for each block Axial or peripheral chronic radicular pain can be particularly severe and debilitating for the patient The aim of treatment is to provide medium long term pain relief and consequently to restore function The therapeutic nerve block performed with a perineural injection of anaesthetic steroid or painkiller is generally used once conservative treatments have proven unsuccessful and is aimed to avoid surgical options Ultrasound guidance offering the direct and real time visualization of the needle and adjacent relevant anatomic structures significantly increases the accuracy and safety of nerve blocks reducing the risk of intraneural or intravascular injection and the potential damage to the surrounding structures but also enhances the efficacy of the block itself reducing its onset and drug doses This practical volume addresses the needs of physicians dealing with pain management e g anaesthesiologists radiologists orthopaedists and physiatrists with various levels of experience ranging from physicians in training to those who already perform peripheral nerve blocks with traditional techniques and who want to familiarize with US guided procedures

Peripheral Nerve Block F.L. Jenkner, 2013-04-17 Fifty years ago surgeons often performed various operations in conduction anesthesia or local anesthesia in the hope of circumventing pulmonary complications The preparation for the operation was the task of an assistant who had to know and carry out the diverse local anesthetic procedures and who was responsible for their effectiveness In this way a large number of physicians learned to carry out nerve blocks which they also applied more and more outside their operative duties The introduction of modern general anesthesia led almost to the disappearance of the special techniques of nerve blocking at the former classic places of their teaching Therefore it is a great merit of my former associate F L Jenkner to recall the art of nerve blocking be it for diagnostic or therapeutic purposes He presents the many possibilities as an addition to the therapeutic armamentarium and explains their indications bases and techniques I do not think that one needs to be a specialist to carry out these useful techniques but one has to have an understanding of certain topographic anatomic situations and one needs to know the rules of the procedure to obviate the risks that are always inherent in any disruption of the integrity of the integument of the human body Thus by presenting all the mentioned aspects a renaissance of good though old practices may be initiated in the light of new achievements
