

Fire Detection Control Panel FMZ 4100

The Minimax fire detection control panel FMZ 4100 is a compact function centre with high availability, combining all the advantages of modern micro-electronics.

The reliable and reasonably priced line technology is ideal for the monitoring of large areas. In addition, digital information can be transferred from each detector thus enabling, amongst other things, individual single alarm identification. As a result of this, it is possible to combine many small areas or rooms in only one detector group. The activated detector can then be clearly identified on the LC display of the fire detection control panel.

The heart of the control panel is a micro processor controlled analysis unit. This unit is responsible for all monitoring and control functions and because of its in-built automatic interrupt control function it can react to alarm signals without delay. The panel itself is monitored by a watchdog timer which is reactivated each time data passes through the cyclic running programme. If the trigger impulse fails to

appear, the programme controlled alarm analysis is interrupted in order to avoid any faulty functioning. In this case, the alarm evaluation continues to function by means of an emergency operational circuit. In the case of interference, maximum only one plug-in unit will fail to function due to the parallel operation of the different analysis units. It is also possible to exchange defective components without any operational interruptions occurring.

The fire detection control panel FMZ 4100 contains all of the essential performance features of the earlier Minimax devices. Additionally, it fulfils all requirements of a modern comprehensive safety-information system with an integrated detector identification system and a large LC display as well as having a report printer, status and intervention system and an interface to building administration systems. These features enable an exact evaluation of the incoming alarms so that preventative measures may be carried out quickly.

Minimax's experience collected over many years in the field of evaluation and assessment of fire characteristics is to be found in an extensive, error-tolerant analysis software. The software enables the system to differentiate between alarm signals and spurious (parasitic) signals. By means of a dialogue between the fire detection control panel and himself, the user is led through the necessary operational phases thereby ruling out, to the greatest possible extent, all possibility of problems arising from incorrect operating or stress influenced abnormal behaviour in the case of alarms or disturbances.

The fire detection control panel FMZ 4100 fulfils the highest safety requirements which are, of course, indispensable in the field of fire protection. The control panel including the system's components are in accordance with the valid guidelines, norms and regulations - especially VDE and EN 54 - and is approved by the "Verband der Schadenversicherer" (VdS, Association of German Property Insurers).
