## **Mirrors And Maps Invert:**

The Inverted Mirror Michael Nolan, 2006-09-01 It is hard to imagine nowadays that for many years France and Germany considered each other as arch enemies And yet for well over a century these two countries waged verbal and ultimately violent wars against each other This study explores a particularly virulent phase during which each of these two nations projected certain assumptions about national character onto the other distorted images motivated by antipathy fear and envy which contributed to the growing hostility between the two countries in the years before the First World War Most remarkably as the author discovered the qualities each country ascribed to its chief adversary appeared to be exaggerated or negative versions of precisely those qualities that it perceived to be lacking or inadequate in itself Moreover banishing undesirable traits and projecting them onto another people was also an essential step in the consolidation of national identity As such it established a pattern that has become all too familiar to students of nationalism and xenophobia in recent decades This study shows that antagonism between states is not a fact of nature but socially constructed

**Classical Mirror Symmetry** Masao Jinzenji, 2018-04-18 This book furnishes a brief introduction to classical mirror symmetry a term that denotes the process of computing Gromov Witten invariants of a Calabi Yau threefold by using the Picard Fuchs differential equation of period integrals of its mirror Calabi Yau threefold The book concentrates on the best known example the quintic hypersurface in 4 dimensional projective space and its mirror manifold First there is a brief review of the process of discovery of mirror symmetry and the striking result proposed in the celebrated paper by Candelas and his collaborators Next some elementary results of complex manifolds and Chern classes needed for study of mirror symmetry are explained Then the topological sigma models the A model and the B model are introduced The classical mirror symmetry hypothesis is explained as the equivalence between the correlation function of the A model of a quintic hyper surface and that of the B model of its mirror manifold On the B model side the process of construction of a pair of mirror Calabi Yau threefold using toric geometry is briefly explained Also given are detailed explanations of the derivation of the Picard Fuchs differential equation of the period integrals and on the process of deriving the instanton expansion of the A model Yukawa coupling based on the mirror symmetry hypothesis On the A model side the moduli space of degree d quasimaps from  $CP^1$  with two marked points to  $CP^4$  is introduced with reconstruction of the period integrals used in the B model side as generating functions of the intersection numbers of the moduli space Lastly a mathematical justification for the process of the B model computation from the point of view of the geometry of the moduli space of quasimaps is given The style of description is between that of mathematics and physics with the assumption that readers have standard graduate student backgrounds in both disciplines
