Period Mappings With Applications To Symplectic Complex Spaces Lecture Notes In Mathematics:

Period Mappings with Applications to Symplectic Complex Spaces Tim Kirschner, 2015-09-15 Extending Griffiths classical theory of period mappings for compact Kähler manifolds this book develops and applies a theory of period mappings of Hodge de Rham type for families of open complex manifolds The text consists of three parts The first part develops the theory The second part investigates the degeneration behavior of the relative Frölicher spectral sequence associated to a submersive morphism of complex manifolds The third part applies the preceding material to the study of irreducible symplectic complex spaces The latter notion generalizes the idea of an irreducible symplectic manifold dubbed an irreducible hyperkähler manifold in differential geometry to possibly singular spaces The three parts of the work are of independent interest but intertwine nicely

Algebraic Geometry: Salt Lake City 2015 Tommaso de Fernex, Brendan Hassett, Mircea Mustață, Martin Olsson, Mihnea Popa, Richard Thomas, 2018-06-01 This is Part 1 of a two volume set Since Oscar Zariski organized a meeting in 1954 there has been a major algebraic geometry meeting every decade Woods Hole 1964 Arcata 1974 Bowdoin 1985 Santa Cruz 1995 and Seattle 2005 The American Mathematical Society has supported these summer institutes for over 50 years Their proceedings volumes have been extremely influential summarizing the state of algebraic geometry at the time and pointing to future developments The most recent Summer Institute in Algebraic Geometry was held July 2015 at the University of Utah in Salt Lake City sponsored by the AMS with the collaboration of the Clay Mathematics Institute This volume includes surveys growing out of plenary lectures and seminar talks during the meeting Some present a broad overview of their topics while others develop a distinctive perspective on an emerging topic Topics span both complex algebraic geometry and arithmetic questions specifically analytic techniques enumerative geometry moduli theory derived categories birational geometry tropical geometry Diophantine questions geometric representation theory characteristic and adic tools etc The resulting articles will be important references in these areas for years to come

Birational Geometry and Moduli Spaces Elisabetta Colombo, Barbara Fantechi, Paola Frediani, Donatella Iacono, Rita Pardini, 2020-02-25 This volume collects contributions from speakers at the INdAM Workshop Birational Geometry and Moduli Spaces which was held in Rome on 11-15 June 2018 The workshop was devoted to the interplay between birational geometry and moduli spaces and the contributions of the volume reflect the same idea focusing on both these areas and their interaction In particular the book includes both surveys and original papers on irreducible holomorphic symplectic manifolds Severi varieties degenerations of Calabi-Yau varieties uniruled threefolds toric Fano threefolds mirror symmetry canonical bundle formula the Lefschetz principle birational transformations and deformations of diagrams of algebras The intention is to disseminate the knowledge of advanced results and key techniques used to solve open problems The book is intended for all advanced graduate students and researchers interested in the new research frontiers of birational geometry and moduli spaces

Period Mappings and Period Domains James Carlson, Stefan Müller-Stach, Chris Peters, 2017-08-11 This up to date

introduction to Griffiths theory of period maps and period domains focusses on algebraic group theoretic and differential geometric aspects Starting with an explanation of Griffiths basic theory the authors go on to introduce spectral sequences and Koszul complexes that are used to derive results about cycles on higher dimensional algebraic varieties such as the Noether Lefschetz theorem and Nori's theorem They explain differential geometric methods leading up to proofs of Arakelov type theorems the theorem of the fixed part and the rigidity theorem They also use Higgs bundles and harmonic maps to prove the striking result that not all compact quotients of period domains are Kähler This thoroughly revised second edition includes a new third part covering important recent developments in which the group theoretic approach to Hodge structures is explained leading to Mumford Tate groups and their associated domains the Mumford Tate varieties and generalizations of Shimura varieties Geometric Invariant Theory David Mumford, John Fogarty, Frances

Kirwan, 1994-03-29 This standard reference on applications of invariant theory to the construction of moduli spaces is a systematic exposition of the geometric aspects of classical theory of polynomial invariants This new revised edition is completely updated and enlarged with an additional chapter on the moment map by Professor Frances Kirwan It includes a fully updated bibliography of work in this area Toroidal Compactification of Siegel Spaces Y.
