Modelling Pricing And Hedging Counterparty Credit Exposure A Technical Guide Springer Finance:

Modelling, Pricing, and Hedging Counterparty Credit Exposure Giovanni Cesari, John Aquilina, Niels Charpillon, Zlatko Filipovic, Gordon Lee, Ion Manda, 2009-12-06 It was the end of 2005 when our employer a major European Investment Bank gave our team the mandate to compute in an accurate way the counterparty credit exposure arising from exotic derivatives traded by the firm. As often happens, exposure of products such as for example exotic interest rate or credit derivatives were modelled under conservative assumptions and credit officers were struggling to assess the real risk. We started with a few models written on spreadsheets tailored to very specific instruments and soon it became clear that a more systematic approach was needed. So we wrote some tools that could be used for some classes of relatively simple products. A couple of years later we are now in the process of building a system that will be used to trade and hedge counterparty credit exposure in an accurate way for all types of derivative products in all asset classes. We had to overcome problems ranging from modelling in a consistent manner different products booked in different systems and building the appropriate architecture that would allow the computation and pricing of credit exposure for all types of products to finding the appropriate management structure across Business Risk and IT divisions of the firm. In this book we describe some of our experience in modelling counterparty credit exposure, computing credit valuation adjustments, determining appropriate hedges and building a reliable system.

Counterparty Credit Risk, Collateral and Funding Damiano Brigo, Massimo Morini, Andrea Pallavicini, 2013-03-05 The book's content is focused on rigorous and advanced quantitative methods for the pricing and hedging of counterparty credit and funding risk. The new general theory that is required for this methodology is developed from scratch leading to a consistent and comprehensive framework for counterparty credit and funding risk inclusive of collateral netting rules, possible debit valuation adjustments, rehypothecation and closeout rules. The book however also looks at quite practical problems linking particular models to particular concrete financial situations across asset classes including interest rates, FX, commodities, equity, credit itself and the emerging asset class of longevity. The authors also aim to help quantitative analysts, traders and anyone else needing to frame and price counterparty credit and funding risk to develop a feel for applying sophisticated mathematics and stochastic calculus to solve practical problems. The main models are illustrated from theoretical formulation to final implementation with calibration to market data always keeping in mind the concrete questions being dealt with. The authors stress that each model is suited to different situations and products, pointing out that there does not exist a single model which is uniformly better than all the others, although the problems originated by counterparty credit and funding risk point in the direction of global valuation. Finally, proposals for restructuring counterparty credit risk ranging from contingent credit default swaps to margin lending are considered.
