Advanced Models of Energy Forecasting Xun Zhang, Bo Meng, Lean Yu, 2022-11-23 Low-carbon, Sustainable Future in East Asia Soo-Cheol Lee, Hector Pollitt, Seung-Joon Park, 2015-08-27 East Asia is a key region in the global economy including both the second and third largest global economies already and led by China continuing to expand at a rapid rate This economic growth has led to unprecedented gains in prosperity in the region but it has also led to increasing environmental pressures and energy issues

This book assesses ways in which East Asia can continue or even increase existing rates of economic growth while at the same time reducing greenhouse gas emissions and other environmental degradation Using advanced modelling approaches future scenarios for four East Asian countries are assessed in detail including analysis of particular challenges in each country e g coal power in China nuclear power in Japan Prospects for each country s energy system are assessed in detail and the potential effects of various types of Environmental Tax Reform in the four countries are also considered carefully The final section of the book explores the interaction between trade liberalization a key driver of growth and emission levels in the East Asia region

Living in a Low-Carbon Society in 2050 H. Herring, 2012-08-29 Combining theory case studies and speculative fiction a range of contributors from leading UK academics to pioneering renewable activists create a compelling picture of the potential perks and pitfalls of a low carbon future

Low Carbon Development Frauke Urban, Johan Nordensvard, 2013-07-18 Low Carbon Development Key Issues is the first comprehensive textbook to address the interface between international development and climate change in a carbon constrained world It discusses the key conceptual empirical and policy related issues of low carbon development and takes an international and interdisciplinary approach to the subject by drawing on insights from across the natural sciences and social sciences whilst embedding the discussion in a global context The first part explores the concept of low carbon development and explains the need for low carbon development in a carbon constrained world The book then discusses the key issues of socio economic political and technological nature for low carbon development exploring topics such as the political economy social justice financing and carbon markets and technologies and innovation for low carbon development This is followed by key issues for low carbon development in policy and practice which is presented based on cross cutting issues such as low carbon energy forestry agriculture and transportation Afterwards practical case studies are discussed from low carbon development in low income countries in Africa middle income countries in Asia and Latin America and high income countries in Europe and North America Written by an international team of leading academics and practitioners in the field of low carbon development this book is essential reading for students academics professionals and policy makers interested in the fields of low carbon development climate change mitigation climate policy climate change and development global environmental change and environment and development

Low Carbon Transitions for Developing Countries Frauke Urban, 2014-06-13 Global climate change is one of the greatest challenges of our times and in order to tackle this carbon emissions need to be mitigated China and India have recently become some of the world s largest greenhouse gas emitters Transitions to low carbon energy for reducing emissions that lead to climate change are therefore an urgent priority for China and India and at a global level This is the first book focusing on low carbon energy transitions for emerging economies such as China and India assessing the opportunities and barriers for transitions to renewable and low carbon energy as climate change mitigation options It uses energy modelling to assess the China s power sector the economy of Beijing and rural Indian

households that do not have access to electricity The research evaluates the environmental technical socio economic and policy implications of these low carbon transitions concluding that they are possible in China and India and they can considerably contribute to climate change mitigation This interdisciplinary book will be of interest to scholars students practitioners and policy makers working in the fields of energy and development energy policy energy studies and modelling climate policy climate change mitigation climate change and development low carbon development sustainable development environment and development and environmental management **Energy 2050** Jim Skea,Paul Ekins,Mark

Winskel,2012-06-25 Based on a major cross disciplinary project undertaken by some of the UK s top energy researchers with common scenarios to draw the research together this book views energy policy in the round with climate policy and energy security in a single framework *Decarbonising The World's Economy: Assessing The Feasibility Of Policies To Reduce Greenhouse Gas Emissions* Terry Barker,Douglas Crawford-brown,2014-11-05 Too often amongst policy makers and thought leaders an assumption is made that we must make a choice between tackling climate change and having a strong economy tackling climate change and allowing poorer nations to develop tackling climate change and having a secure energy system However a decade of advanced modelling tested against historical data has provided wide evidence that well chosen policies can be implemented that avoid these apparent either or choices This highly interdisciplinary book provides an overview of potential pathways for the decarbonisation of the global economy By examining the entire global economy we show policy makers and thought leaders that greatly reducing the risks of climate change can be consistent with energy security economic development in poor nations and vibrant economies in already developed nations Advanced models of the relationships between the economy energy and climate change pioneered at the Cambridge Centre for Climate Change Mitigation Research 4CMR over the past decade provides a sound evidence base for decisions This book examines not only the impacts of policies but also the feasibility of bringing them forward and the ways in which energy climate and economic policies can and must be joined up if climate energy and economic goals are to be met globally Economists physicists engineers policy analysts environmental scientists climate scientists political analysts lawyers and computational scientists are brought together for the first time to produce analyses that make up a unique approach to a global problem that must be addressed sooner rather than later **Low Carbon Urban Infrastructure Investment in Asian Cities** Joni

Jupesta,Takako Wakiyama,2016-06-01 Several Asian cities have already invested in initiatives to build and promote Green Cities Owing to the limited capacity of local governments the funding of urban infrastructure has become a critical issue Against this background this book explores a new funding mechanism which demands the engagement of many stakeholders including public private partnerships This book offers guidance on how cities in selected countries can play a key role in the green growth agenda by stimulating growth through smart investment in urban infrastructure such as through building a physical infrastructure offering financial and tax incentives and heightening society s awareness of a sustainable lifestyle

Energy, Environmental and Economic Sustainability in East Asia Soo-Cheol Lee, Hector Pollitt, Kiyoshi

Fujikawa, 2019-08-06 This book looks at institutional reforms for the use of energy water and resources toward a sustainable future in East Asia The book argues that developments in the East Asian region are critical to global sustainability and acknowledges that there is an increasing degree of mutual reliance among countries in East Asia primarily China Japan Korea and Taiwan It analyzes environmental impacts stemming from the use of energy water and mineral resources via economic development in East Asia in the medium to long term through 2050 through theoretical and empirical modelling The book also evaluates the ripple effects of environmental and resource policies on each country's economy and clarifies the direction of institutional reform in energy systems resources and water use for a sustainable future *The Social Challenges and Opportunities of Low Carbon Development* Johan Nordensvärd, 2016-10-04 This book explores the social implications and challenges of low carbon development The argument of the book is that a broad understanding of low carbon development is essential for mitigating climate change and enabling development in a carbon constrained world but there are risks that low carbon development might come at a price that is both social and economic These risks need to be carefully assessed and reduced The main aim of the book is to explore critically analyse and propose different ways of understanding low carbon development from a social perspective in both developed and developing countries The author uses concepts such as low carbon development social policy sustainable development and environmental justice to understand the social implications of low carbon development projects The book first elaborates the need to understand the social issues and challenges of low carbon development in both developed and developing countries It then discusses five contemporary challenges of low carbon development the social consequences of Chinese hydropower dams in the Mekong region the cost of the transition to renewable energies such as wind energy in Germany the challenges of carbon offsetting in Brazil the nexus of fuel inefficient housing and fuel poverty in England solar power for refugees in Africa The book fills a crucial gap for researchers postgraduates practitioners and policy makers in the fields of climate change development and social policy Johan Nordensvärd is a Lecturer in Social Policy at the University of Southampton UK *Energy Security* Nikolai Mouraviev, Anastasia Koulouri, 2018-10-17 This book discusses energy policy within the framework of the expansion of renewable energy sources RES and increasing resource use efficiency In this book the term resource efficiency is defined as deriving the most value from resource inputs related to energy production while incorporating energy efficiency The authors highlight the drivers policy approaches governance issues and management problems related to the reduction of dependency on fossil fuels by focusing on RES and resource efficiency Mouraviev and Koulouri argue that enhancing energy security requires a new approach integrating two core components the emphasis on increasing energy production from renewable sources and resource use efficiency which forms a contrast to the traditional understanding of energy security as security of supply Blending theory with practice using several case studies this original book provides a novel conceptualisation of energy

security that will be of interest and value to practitioners and policy makers as well as scholars and researchers *Finance and the Macroeconomics of Environmental Policies* P. Arestis, M. Sawyer, 2015-01-29 This volume examines current and previous environmental policies and suggests alternative strategies for the future Addressing resource depletion and climate change are pressing priorities for modern economies Planning energy infrastructure projects is complicated by uncertainty as such clear government policies have a crucial role to play Energy and Development Frauke Urban, 2019-10-21 This book explores the complex relationship between energy and development and discusses the core issues and concepts surrounding this growing area of research and policy In the field of energy and development the world faces two major challenges 1 Providing energy access to the roughly one billion people worldwide who do not have access to electricity and the nearly three billion people worldwide who do not have access to clean cooking fuels 2 achieving socioeconomic development while limiting global atmospheric temperature increases to 2 degrees Celsius to mitigate climate change Taking stock of progress Frauke Urban explores the key issues surrounding these goals and addresses the policy responses aimed at ending energy poverty and achieving sustainable development She outlines various options for delivering energy access analyses past and prospective energy transitions and examines the social environmental economic and technological implications of these possibilities Taking a holistic and multi disciplinary approach and containing useful teaching resources *Energy and Development* provides a comprehensive overview of this complex field of study This book will be a great resource for postgraduate and undergraduate students scholars practitioners and policymakers working in the fields of energy studies international development environmental studies industrial engineering as well as social sciences that relate to energy and development **Economic Policies of the New Thinking in Economics** Philip Arestis, Malcolm Sawyer, 2014-10-20 The financial crisis and the great recession have generated the need for new thinking in economics and for new economic policies to secure sustainable and equitable economic development The new thinking in economics is an interdisciplinary approach to economic problems that acknowledges and respects insights and analyses from other disciplines and recognizes complexity and evolutionary theory as relevant for understanding economic systems and economic behaviour New Economics is concerned with institutional behaviour expectations and uncertainty as opposed to traditional economics with its emphasis on equilibrium mathematical formalism and deterministic solutions With the financial crisis brought on by the unrestrained pursuit of personal and corporate profit sanctioned by traditional economics this is an opportune moment to establish a new way of approaching economic understanding based on new economic theory It is also a good time to instigate new ideas on the approach to economic policy across a wide range of areas such as macroeconomic and global governance employment and unemployment social security and pensions This book is devoted to developing economic policies from the new thinking It was originally published as a special issue of the *International Review of Applied Economics* *Advances in Production Management Systems. Production Management Systems for Volatile, Uncertain, Complex, and Ambiguous Environments*
