

Models of the Experiential Phase of Psi: Quantum Mechanical & Cognitive Approaches

Theresa M. Kelly, MsD.

Abstract

In this chapter, I address the psychological aspects of how and when human beings are able to utilize psi through promising models including models involving quantum mechanical approaches to cognition, and memory models. Such models of psi manifestation attempt to explain how extrasensory information enters the central nervous system or information processing center, and how the system deals with that information. In regards to psychokinesis, such models attempt to explain what manner of information processing is taking place, and what the requirements for the information to be transmitted into the environment are. In addition I address biological utilization of non-local communication, the reverse direction problem, the binding problem, the human brain and neuro-quantum interactions, and rain stimulation via circumcerebral magnetic fields. In addition, I address the question whether a quantum-like approach is actually more advantageous over classical approaches, and address quantum mechanical principles, properties and features resulting cognitive effects related to content sensitivity, association, the human lexicon, and psychological function in general. I also touch on quantum-like mental entanglement, how this new quantum mechanical approach is shedding light on an array of anomalous experimental results composed over the greater portion of a century, pseudo-sensory models, memory models involving memory theory and associated phenomenology, receptive psi processes, memory and psi processes, the first sight model, psi requirements, and the part played by the default mode network.

Key Words: psi phenomena, experiential phase of psi, memory models, central nervous system, extrasensory perception, psychokinesis, macroscopic quantum entanglement, biological non-local communication, photic stimulated experimentation, neuro-quantum interactions, qigong, friends vs. strangers, cognitive science, content sensitivity, human lexicon, psychological functions, Hilbert space, law of total probability, Bell's theorem, background field, vacuum field, white noise, psi process, psi production, hallucinations, memorial images, psi level of engagement, assimilation, contrast, default mode network, medial parietal cortex, medial prefrontal cortex, transcendental meditation, depression, autism, schizophrenia, , post-traumatic stress disorder, emotional hypersensitivity.

The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and gripping novel that will keep you wondering until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
