Quality Tools for Managing Construction Projects Abdul Razzak Rumane,2013-04-25 Dealing with such a multi layered and fungible intangible as quality during the design and construction process is difficult for all parties involved To the architect quality means an appealing and enduring design but to the builder it means understandable documents that when acted upon lead to an enduring well made structure To the owner it is the end result a building that is not only fit for the purpose but a positive addition to its surroundings Reconciling these seemingly contrasting priorities requires processes that are embedded not just at the project level but within the entire enterprise with designer builder and owner committed to
