Immunosuppression in Inflammatory Bowel Diseases K. Fellermann,D.P. Jewell,W.J. Sandborn,J. Schölmerich,E.-F. Stange,2001-06-30 The aetiology of the chronic inflammatory bowel diseases Crohn s disease and ulcerative colitis is still enigmatic The therapeutic approach has therefore traditionally focused on anti inflammatory principles including corticosteroids and aminosalicylates Since a significant proportion of patients is steroid dependent or refractory and because of the problematic side effects of long term systemic steroids active immunosuppression has gained acceptance in the field The classical immunosuppressants azathioprine and 6 mercaptopurine have long been evidence based in IBD but underused Recently methotrexate and cyclosporine have also been proven to be effective in certain situations Newer drugs like tacrolimus mycophenolate and others may be similarly useful but their

potential is still unclear Finally the immune modifiers including IL 10 and TNF antibodies have been successfully subjected to controlled trials Other experimental drugs discussed in this book are on the horizon This volume is the Proceedings of Falk Symposium 119 held in Freiburg im Breisgau Germany October 3 4 2000 and covers systematically the field of immunosuppression in inflammatory bowel diseases It is hoped that it will further the prudent use of these drugs in the proper clinical situations by increasing our understanding of both the mechanisms of action and the clinical benefit to the patient
