G. van Heeswijk, 1990 A comprehensive text on the theory and performance of transformers and electromechanical energy conversion devices this text features a description of steady state operation first followed by broad concepts of conversion of energy Dynamic circuit theory is gradually introduced Force and torque equations are developed first then by means of primitives the voltage equations are formulated systematically A flexible organization allows instructors to select material for one two or three term courses *Electric Machines* Charles A. Gross, 2006-10-20 The two major broad applications of electrical energy are information processing and energy processing Hence it is no wonder that electric machines have occupied a large and revered space in the field of electrical engineering Such an important topic requires a careful approach and Charles A Gross Electric Machines offers the most balanced application oriented and modern perspective on electromagnetic machines available Written in a style that is both accessible and authoritative this book explores all aspects of electromagnetic mechanical EM machines Rather than viewing the EM machine in isolation the author treats the machine as part of an integrated system of source controller motor and load The discussion progresses systematically through basic machine physics and principles of operation to real world applications and relevant control issues for each type of machine presented Coverage ranges from DC induction and synchronous machines to specialized machines such as transformers translational machines and microelectromechanical systems MEMS Stimulating example applications include electric vehicles wind energy and vertical transportation Numerous example problems illustrate and reinforce the concepts discussed Along with appendices filled with unit conversions and background material Electric Machines is a succinct in depth and complete guide to understanding electric machines for novel applications **Energy Materials Coordinating Committee (EMaCC): Fiscal Year 2000 Annual Technical Report** , *Energy and Water*
