President (2001-2009 : Bush),2010      *The End of Greatness* Aaron David Miller,2014-10-07 The Presidency has always been an implausible some might even say an impossible job Part of the problem is that the challenges of the presidency and the expectations Americans have for their presidents have skyrocketed while the president s capacity and power to deliver on what ails the nations has diminished Indeed as citizens we continue to aspire and hope for greatness in our only nationally elected office The problem of course is that the demand for great presidents has always exceeded the supply As a result Americans are adrift in a kind of Presidential Bermuda Triangle suspended between the great presidents we want and the ones we can no longer have The End of Greatness explores the concept of greatness in the presidency and the ways in which it has become both essential and detrimental to America and the nation s politics Miller argues that greatness in presidents is a much overrated virtue Indeed greatness is too rare to be relevant in our current politics and driven as it is by nation encumbering crisis too dangerous to be desirable Our preoccupation with greatness in the presidency consistently inflates our expectations skews the debate over presidential performance and drives presidents to misjudge their own times and capacity And our focus on the individual misses the constraints of both the office and the times distorting how Presidents actually lead In wanting and expecting our leaders to be great we have simply made it impossible for them to be good The End of Greatness takes a journey through presidential history helping us understand how greatness in the presidency was achieved why it s gone and how we can better come to appreciate the presidents we have rather than being consumed with the ones we want      *Journal of the Executive Proceedings of the Senate of the United States* United States. without encoding virulence factors The nature of their effect on the bacterial pathogenicity and overall physiology is the next frontier in understanding intricate relationship between the filamentous phage and their hosts Phage display has been widely used as a combinatorial technology of choice for discovery of therapeutic antibodies and peptide leads that have been applied in the vaccine design diagnostics and drug development or targeting over the past thirty years Virion proteins of filamentous phage are integral membrane proteins prior to assembly hence they are ideal for display of bacterial surface and secreted proteins The use of this technology at the scale of microbial community has potential to identify host interacting proteins of uncultivable or low represented community members Recent applications of Ff filamentous phage extend into protein evolution synthetic biology and nanotechnology In many applications phage serves as a monodisperse long aspect nano scaffold of well defined shape Chemical or genetic modifications of this scaffold are used to introduce the necessary functionalities such as fluorescent labels ligands that target specific proteins or peptides that promote formation of inorganic or organic nanostructures We anticipate that the future holds development of new strategies for particle assembly site specific multi functional modifications and improvement of existing modification strategies These improvements will render the production of filamentous phage templated materials safe and affordable allowing their applications outside of the laboratory
