**We, Robots** Curtis White, 2015 In the noble tradition of Jaron Lanier's *You Are Not a Gadget* Penguin 2011 Curtis White's *We Robots* takes the radical position that maybe we shouldn't cede every bit of control humanity and decision making to technology and that the techno futurists in our mix have things dangerously backwards What a notion In this sharply argued and rousing book White not only attacks the technology loving establishment but offers a beautiful and essential alternative

**MENTALLY HEALTHY IN THE DIGITAL ERA: Staying Human in the Advanced Technology Realm** Elizabeth Kristi Poerwandari, 2025-05-01 This book is highly relevant to the current state of affairs which is full of dilemmas and contradictions On one hand humanity is experiencing extraordinary advancements in life due to technological progress On the other hand people are regressing in social activities and roles that once defined their identity The ever expanding knowledge and the ability to complete tasks quickly with the aid of technology contradict the rising psychological issues such as a tendency to give up easily and feeling alone even in the midst of a crowd As a result humanity today finds itself in a fragile condition full of confusion and struggling to predict what will happen tomorrow due to an insufficient understanding of the metaverse a phenomenon described as BANI brittle anxious nonlinear incomprehensible With great patience Kristi Poerwandari attempts to deepen our understanding of what is happening and what we must do to strengthen ourselves Ricardi S Adnan Professor of Sociology Universitas Indonesia

**We Are Data** John Cheney-Lippold, 2017-05-02 Do algorithms get to decide who we are Essential reading for anyone who cares about the internet's extraordinary impact on each of us and on our society Kirkus Reviews starred review Derived from our every search like click and purchase algorithms determine the news we get the ads we see the information accessible to us and even who our friends are These complex configurations not only form knowledge and social relationships in the digital and physical world but also determine who we are and who we can be both on and offline Algorithms create and recreate us using our data to assign and reassign our gender race sexuality and citizenship status They can recognize us as celebrities or mark us as terrorists In this era of ubiquitous surveillance contemporary data collection entails more than gathering information about us Entities like Google Facebook and the NSA also decide what that information means constructing our worlds and the identities we inhabit in the process We have little control over who we algorithmically are Our identities are made useful not for us but for someone else Through a series of entertaining and engaging examples John Cheney Lippold draws on the social constructions of identity to advance a new understanding of our algorithmic identities *We Are Data* will inspire those who want to wrest back some freedom in our increasingly surveilled and algorithmically constructed world

*Living with Robots* Ruth Aylett, Patricia A. Vargas, 2023-05-02 The truth about robots two experts look beyond the hype offering a lively and accessible guide to what robots can and can't do There's a lot of hype about robots some of it is scary and some of it utopian In this accessible book two robotics experts reveal the truth about what robots can and can't do how they work and what we can reasonably expect their future capabilities to be It will not only make you think differently about the capabilities of robots it will make you think differently about the capabilities of humans Ruth Aylett and Patricia Vargas discuss the history of our fascination with robots from chatbots and prosthetics to autonomous cars and robot swarms They show us the ways in which robots outperform humans and the ways they fall woefully short of our superior talents They explain how robots see feel hear think and learn describe how robots can cooperate and consider robots as pets butlers and companions Finally they look at robots that raise ethical and social issues killer robots sexbots and robots that might be gunning for your job *Living with Robots* equips readers to look at robots concretely as human made artifacts rather than placeholders for our anxieties Find out Why robots can swim and fly but find it difficult to walk Which robot features are inspired by animals and insects Why we develop feelings for robots Which human abilities are hard for robots to emulate

**Falter** Bill McKibben, 2019-04-16 Thirty years ago Bill McKibben offered one of the earliest warnings about climate change Now he broadens the warning the entire human game he suggests has begun to play itself out Bill McKibben's groundbreaking book *The End of Nature* issued in dozens of languages and long regarded as a classic was the first book to alert us to global warming But the danger is broader than that even as climate change shrinks the space where our civilization can exist new technologies like artificial intelligence and robotics threaten to bleach away the variety of human experience *Falter* tells the story of these converging trends and of the

ideological fervor that keeps us from bringing them under control And then drawing on McKibben's experience in building 350.org the first truly global citizens movement to combat climate change it offers some possible ways out of the trap We're at a bleak moment in human history and we'll either confront that bleakness or watch the civilization our forebears built slip away Falter is a powerful and sobering call to arms to save not only our planet but also our humanity

**Human-in-the-Loop Robot Control and Learning** Luka Peternel, Jan Babič, Erhan Oztop, Tetsunari Inamura, Dingguo Zhang, 2020-01-22 In the past years there has been considerable effort to move robots from industrial environments to our daily lives where they can collaborate and interact with humans to improve our life quality One of the key challenges in this direction is to make a suitable robot control system that can adapt to humans and interactively learn from humans to facilitate the efficient and safe co-existence of the two The applications of such robotic systems include service robotics and physical human robot collaboration assistive and rehabilitation robotics semi-autonomous cars etc To achieve the goal of integrating robotic systems into these applications several important research directions must be explored One such direction is the study of skill transfer where a human operator's skilled executions are used to obtain an autonomous controller Another important direction is shared control where a robotic controller and humans control the same body tool mechanism car etc Shared control in turn invokes very rich research questions such as co-adaptation between the human and the robot where the two agents can benefit from each other's skills or must adapt to each other's behavior to achieve effective cooperative task executions The aim of this Research Topic is to help bridge the gap between the state of the art and above mentioned goals through novel multidisciplinary approaches in human in the loop robot control and learning
