*Handbook of Water and Wastewater Systems Protection* Robert M. Clark, Simon Hakim, Avi Ostfeld, 2011-09-01 Following the events of 9 11 the Administrator of the US Environmental Protection Agency created the Water Protection Task Force WPTF which identified water and wastewater systems as a major area of vulnerability to deliberate attack The WPTF suggested that there are steps that can be taken to reduce these vulnerabilities and to make it as difficult as possible for potential saboteurs to succeed The WPTF recommended that be scrutinized with renewed vigor to secure water and wastewater systems against these possible threats It also recommended that water and wastewater systems have a response plan in place in the event an act of terrorism occurs The WPTF identified water distribution networks as an area of special vulnerability and highlighted the need for rapid on line detection methods that are accurate and have a wide detection range As a result of these recommendations novel technologies from various fields of science and engineering are now addressing water security issues and water and wastewater utilities are looking for innovative solutions Once such technologies are available there will be a rapid implementation process that will present many business opportunities for the private sector However in addition to terrorist threats water and wastewater systems are inherently vulnerable to natural disasters such as earthquakes and floods This volume will address the problems associated with both intended terrorist attacks and natural disasters affecting water or wastewater systems The book is divided into parts based on the kinds of threats facing water and wastewater systems 1 a direct attack on water and wastewater infrastructure storage reservoirs and distribution and collection networks 2 a cyber attack disabling the functionality of the water and wastewater systems or taking over control of key components which might result in system failures and 3 a deliberate chemical or biological contaminant injection at one of the water distribution system s nodes It will examine unique plans technological and managerial innovations for protecting such systems and includes descriptions of projects that were implemented to respond to natural disasters Case studies are presented that discuss existing projects and evaluate their performance with an emphasis on providing guidelines and techniques that can be implemented by water and wastewater planners and managers to deal with natural and manmade disasters should they occur

**Basic Microbiology: A Illustrated Laboratory Manual** B. K. Khuntia, 2011-01-01 This treatise is an introductory book for fresh students entering into the field of microbiology. The fundamental techniques which are basic to all laboratories involved in microbiological and associated works have been described with illustrations. Moreover, concise information about different microorganisms such as bacteria, viruses, protozoa, microscopic fungi, and microscopic algae has been given so as to acquaint the students with these microbes before starting any experiment on them. A total of 55 experiments have been described in a step-wise manner along with illustrative flow diagrams for all the experiments. All attempts have been made to make the manual user-friendly by making each experiment a separate and independent one so that it can be conducted without borrowing steps from any other experiment. A total of 128 illustrations and 27 illustrated reactions have made the manual a real illustrated one, making its use very easy and simple. The book shall be a valuable piece of information and an easily comprehensible aid in microbiology laboratories for students, teachers, scientists, laboratory personnel, and all associated with microbiology and allied subjects. *A Numerical Investigation of Metabolic Reductive Dechlorination in DNAPL Source Zones* John Anthony Christ, 2005 Among the most intractable environmental remediation problems are those involving the release of dense non

aqueous phase liquids DNAPLs such as chlorinated solvents to the subsurface Research efforts have focused on the use of numerical models to investigate reductions in contaminant concentrations due to partial mass removal and improvements in the performance of complementary source zone remediation technologies Previous numerical investigations however have been limited to two dimensional systems Furthermore a lack of models capable of simulating the most promising complementary technology metabolic reductive dechlorination has limited its application This work developed and applied compositional multiphase numerical simulators to examine the influence of dimensionality two dimensions versus three dimensions on DNAPL source zone simulations and to investigate the benefits of stimulating metabolic reductive dechlorination at a chlorinated ethene DNAPL contaminated site Results from the dimensionality investigation showed that the simulation of DNAPL migration entrapment and dissolution in two dimensions provided reasonable approximations to the behavior simulated in three dimensions Commonly employed saturation distribution and mass recovery metrics were approximately equivalent Flux averaged concentrations simulated in two dimensions however tended to be three to four times higher than those simulated in three dimensions This difference was attributed to dilution at the down gradient boundary An alternative metric mass flux reduction however yielded better agreement
