Lists and definitions of the most common pathologies likely to be encountered during specific procedures help you understand the whole patient and produce radiographs that will make diagnosis easier for the physician. Labeled radiographs identify key radiographic anatomy and landmarks to help you determine if you have captured the correct diagnostic information on your images. Evaluation Criteria for each projection provide standards for evaluating the quality of each radiograph and help you produce the highest quality images. Clinical Indications sections explain why a projection is needed or what pathology is demonstrated to give you a better understanding of the reasoning behind each projection. Increased emphasis on digital radiography keeps you up to date with the most recent advances in technology. Completely updated content offers expanded coverage of important concepts such as digital imaging systems, updated CT information, and AART exam requirements. More CT procedures with related sectional images, especially for areas such as skull and facial bones, reflect the shift in the field from conventional radiography to CT.
