## **Oie Terrestrial Manual 2012:**

*Rabies in Man and Animals* Sudhi Ranjan Garg, 2013-10-23 Rabies is the deadliest zoonotic disease that threatens humans and animals on all continents except Antarctica Asia and Africa are worst affected as more than 95 per cent of rabies associated human deaths occur in these regions India alone bears about 36 per cent of the global human rabies burden Dogs are the main transmitters of rabies that potentially threaten over 3 billion people in Asia and Africa Many developed nations have been able to successfully control dog rabies but continue to face the risk from wildlife including bats Bat rabies is responsible for most human rabies deaths in the United States of America and Canada but has emerged as a public health threat in Australia Latin America and Western Europe as well Despite being vaccine preventable rabies continues to haunt the mankind Poor resources is a major constraint but the factors like low priority attributed to rabies misconceptions in the community about the disease and unsystematic approach for its prevention and control are also responsible for the grim situation Targets have been set for elimination of human and dog rabies in all Latin American countries by 2015 and of human rabies transmitted by dogs in South East Asia by 2020 However the myths prevailing among the people together with inadequate knowledge of the health professionals veterinarians and the civic body staff about the rabies prevention and control strategies might make the task very difficult This book comprising eight chapters elaborates the causation of rabies in man and animals its global epidemiology risk analysis and effective strategies for the management of exposures Proven methods of rabies prevention and control have been discussed in length along with the challenges and ways to overcome the constraints through intersectoral coordination The inclusion of 200 frequently asked questions is a unique feature of the book which may help not only the common people and pet lovers in clearing their doubts about rabies in man and animals also be equally instrumental in updating the knowledge and skills of the public health personnel veterinarians and other professionals Apt illustrations and simple language make the contents of the book easily comprehensible and a reading pleasure

Emerging Infectious Diseases ,2014 **Tuberculosis in Animals: An African Perspective** Asseged B.

Dibaba,Nicolaas P. J. Kriek,Charles O. Thoen,2019-07-01 This book recounts the biology of M bovis followed by the status of bovine Tuberculosis bTB in African countries primarily based on zoonotic and epidemiological field reports Since the accumulation of data is valueless unless it led to practicable control measures emphasis is put on locally adapted protocols for future control of the disease In order to systematically evaluate the knowledge base of bTB Epidemiologic Problem Oriented Approach EPOA methodology was used The methodology is composed of two triads i the problem identification characterization triad which is mainly descriptive in nature and ii the problem management solution mitigation triad which is mainly geared toward problem management solution see figure The first triad comprises three pillars i agent ii host and iii environment and the second one i therapeutics treatment ii prevention control and iii health maintenance promotion The two triads are linked together by the diagnostic procedure linkage The systematic and detailed studies of the Host Agent Environment interactions are the building blocks to the understanding of agent transmission pathways and disease spread These may include data about the disease status of the country the nature of the disease agent and its hosts the modes of transmission the wildlife reservoirs in nature persistence of infection and agent survival in animal products and the environment The problem identification and characterization triad identifies these interactions Once a problem has been identified and well understood the next step is to minimize the risk of transmission and spread of a disease This area referred to as problem solution management triad consists of problem management alternatives that rely upon prevention control and

health maintenance promotion of the disease in livestock wildlife and humans with the emphasis on resource poor developing countries in Africa

**Emerging and Re-emerging Infectious Diseases of Livestock** Jagadeesh Bayry, 2017-02-07 This book provides comprehensive knowledge on diseases in livestock that are caused by viruses parasites and bacteria Emerging and re emerging pathogens are presented in detail for various animal groups and in depth insights into pathogenesis and epidemiology will be provided for each of them In addition state of the art treatment possibilities control measures as well as vaccination strategies are discussed The recent years have witnessed a sharp increase in the number of emerging and re emerging infectious diseases of livestock and many of these including Influenza Corona and Hanta are of public health importance The reasons for this development are manifold changes in the climate life cycle of vectors and increased global travel Also due to extensive deforestation livestock are increasingly coming in direct contact with wild animals that are reservoirs of many emerging pathogens Recent progress in diagnosis and management of emerging infectious diseases are also topic of this book

*Zoonoses: Infections Affecting Humans and Animals* Andreas Sing, 2023-10-09 This second fully revised and extended edition of *Zoonoses Infections Affecting Humans and Animals* covers the most important pathogens impacting both human and animal public health and debates current developments in this interdisciplinary field from a One Health perspective Following a setting approach the individual chapters each review zoonoses occurring in a specific group of animals such as production animals pets or wildlife or in a defined ecosystem A focus is put on zoonoses emerging along the food chain and on antibiotic resistance as an increasing challenge in infectious disease management Special interest chapters debate non resolved and currently hotly debated zoonoses foremost COVID 19 influenza Crohn paratuberculosis and chronic botulism also taking into account the economic and ecological aspects of zoonotic disease outbreaks This second edition includes brand new chapters on emerging pathogens such as SARS CoV 2 chlamydia and helminths it reviews historic zoonoses provides additional insights into pathogens of reptiles and highlights significant neglected tropical diseases This reference work is a must read for researchers health professionals and students in Microbiology and Veterinary Medicine The book s ambition to spread knowledge on zoonoses and on strategies on how to tackle them complies with the United Nations Sustainable Goals in particular Goal 3 Good Health and Well Being

**The Guinea Pig Model** Viviana Parreño, 2023-04-10 This book summarizes the development and statistical validation of a guinea pig model as an alternative for potency testing of the viral antigens included in combined vaccines applied in cattle to control the respiratory reproductive and neonatal calf diarrhea syndromes The model allows in one serum sample to test the vaccine quality for all the viral antigens included in aqueous as well as in oil adjuvanted formulations of bovine vaccines The methodology proposed for the control of bovine herpes virus parainfluenza and rotavirus were recommended by CAMEVET as guidelines for the 30 countries in the forum including the US Key Features Reviews combined vaccines used for cattle Summarizes animal models used for vaccine testing Focuses on bovine herpesviruses rotaviruses parainfluenza and bovine viral diarrhea virus Provides

guidance on the effectiveness of the Guinea Pig model for testing vaccine immunogenicity      **Modeling Disease Spread and Control** Tariq Halasa, Salome Dürr, 2018-01-18 Mathematical models are useful tools to understand the epidemiology and agent host interaction of diseases. They are developed and applied since over a century but with increasing computer capacity they become increasingly prominent as part of evidence based decision making. Mathematical models are frequently used to construct preparedness and contingency plans for highly contagious diseases such as foot and mouth disease. This allows proposing effective strategies to control the spread of the disease in case of an incursion and avails useful tools to support decision making during an outbreak. They are also used to monitor prevent and control endemic diseases within populations or farms. In addition mathematical models improve our understanding of the contact structure between farms pointing out risky elements in the contact network for disease introduction or further spread within the population. This Research Topic presents valuable studies presenting different aspects and implementations of mathematical modeling for disease spread and control in the veterinary field. The areas covered include model construction network analysis tools for decision makers and cost effective control of endemic diseases.
