Lemieux,Jean-Pierre Després,2021-01-28 Metabolic syndrome has been the topic of countless publications It still remains a subject of debate and some experts have even questioned its clinical relevance Its diagnosis is nevertheless predictive of an increased risk of type 2 diabetes and cardiovascular disease even in the absence of traditional risk factors Many years ago our team made the point that the most prevalent form of metabolic syndrome was linked to abdominal obesity which can be found even among individuals who are not considered obese by body weight standards Imaging techniques such as computed tomography and magnetic resonance imaging have revealed the link between regional body fat partitioning and cardiometabolic risk Visceral obesity is the most dangerous form of obesity with subcutaneous obesity being associated with lower health risk We have proposed that excess visceral fat may be a marker of subcutaneous adipose tissue dysfunction not being able to serve as a metabolic sink causing lipid accumulation at undesired sites a condition described as ectopic fat deposition Among the effective approaches to prevent delay or manage metabolic syndrome lifestyle changes are the key elements with an emphasis on the importance of healthy global dietary patterns regular physical activity and adequate sleep quality **Underutilised Resources in Urban Environments** Sigrid Kusch-Brandt,2020-06-18 This book is the result of a Special Issue of the journal Resources The Special Issue was initiated to identify promising solutions and specific challenges in the context of underused resources in urban environments Authors focus on two main areas the establishment of circular economy schemes based on valorizing wastes that occur in urban areas and the exploitation of renewable energies The

circular economy and renewable resources hold key potential for increasing the sustainability of cities and the presented studies enhance our understanding of how to unlock this potential Effective regulatory frameworks and policymaking processes that balance the power between stakeholders are required to successfully manage energy transition and the transition to more circular economies The positive role of community engagement merits high attention To recover valuable resources from household waste a focus on technology and infrastructure is required but is insufficient motivational factors and knowledge of citizens are the most essential elements The need to more reliably quantify and better characterize recyclable material streams also evidently remains especially where population numbers are further growing This book provides a rich source to explore promising solutions challenges and research needed for the sound management of resources in urban settings
