Ontology Based Interpretation Of Natural Language Christina Unger:

Ontology-Based Interpretation of Natural Language Philipp Cimiano, Christina Unger, John McCrae, 2014-03-01 For humans understanding a natural language sentence or discourse is so effortless that we hardly ever think about it For machines however the task of interpreting natural language especially grasping meaning beyond the literal content has proven extremely difficult and requires a large amount of background knowledge This book focuses on the interpretation of natural language with respect to specific domain knowledge captured in ontologies The main contribution is an approach that puts ontologies at the center of the interpretation process This means that ontologies not only provide a formalization of domain knowledge necessary for interpretation but also support and guide the construction of meaning representations We start with an introduction to ontologies and demonstrate how linguistic information can be attached to them by means of the ontology lexicon model lemon These lexica then serve as basis for the automatic generation of grammars which we use to compositionally construct meaning representations that conform with the vocabulary of an underlying ontology As a result the level of representational granularity is not driven by language but by the semantic distinctions made in the underlying ontology and thus by distinctions that are relevant in the context of a particular domain We highlight some of the challenges involved in the construction of ontology based meaning representations and show how ontologies can be exploited for ambiguity resolution and the interpretation of temporal expressions Finally we present a question answering system that combines all tools and techniques introduced throughout the book in a real world application and sketch how the presented approach can scale to larger multi domain scenarios in the context of the Semantic Web

Semantic Similarity from Natural Language and Ontology Analysis Sébastien Harispe, Sylvie Ranwez, Stefan Janaki, Jacky Montmain, 2022-05-31

Artificial Intelligence federates numerous scientific fields in the aim of developing machines able to assist human operators performing complex treatments most of which demand high cognitive skills e g learning or decision processes Central to this quest is to give machines the ability to estimate the likeness or similarity between things in the way human beings estimate the similarity between stimuli In this context this book focuses on semantic measures approaches designed for comparing semantic entities such as units of language e g words sentences or concepts and instances defined into knowledge bases The aim of these measures is to assess the similarity or relatedness of such semantic entities by taking into account their semantics i e their meaning intuitively the words tea and coffee which both refer to stimulating beverage will be estimated to be more semantically similar than the words toffee confection and coffee despite that the last pair has a higher syntactic similarity The two state of the art approaches for estimating and quantifying semantic similarities relatedness of semantic entities are presented in detail the first one relies on corpora analysis and is based on Natural Language Processing techniques and semantic models while the second is based on more or less formal computer readable and workable forms of knowledge such as semantic networks thesauri or ontologies Semantic measures are widely used today to compare units of language concepts instances or even resources indexed by them e g documents genes They are central elements of a large variety of Natural Language Processing applications and knowledge based treatments and have therefore naturally been subject to intensive and interdisciplinary research efforts during last decades Beyond a simple inventory and categorization of existing measures the aim of this monograph is to convey novices as well as researchers of these domains toward a better understanding of semantic similarity estimation and more generally semantic measures To this end we propose an in depth characterization of existing proposals by discussing their features the assumptions on which they are based and empirical results regarding their performance in particular applications By answering these questions and by providing a detailed discussion on the foundations of semantic measures our aim is to give the reader key knowledge required to i select the more relevant methods according to a particular usage context ii understand the challenges offered to this field of study iii distinguish room of improvements for state of the art approaches and iv stimulate creativity toward the development of new approaches In this aim several definitions theoretical and practical details as well as concrete applications are presented

Embeddings in

Natural Language Processing Mohammad Taher Pilehvar, Jose Camacho-Collados, 2022-05-31 Embeddings have undoubtedly been one of the most influential research areas in Natural Language Processing NLP Encoding information into a low dimensional vector representation which is easily integrable in modern machine learning models has played a central role in the development of NLP Embedding techniques initially focused on words but the attention soon started to shift to other forms from graph structures such as knowledge bases to other types of textual content such as sentences and documents This book provides a high level synthesis of the main embedding techniques in NLP in the broad sense The book starts by explaining conventional word vector space models and word embeddings e g Word2Vec and GloVe and then moves to other types of embeddings such as word sense sentence and document and graph embeddings The book also provides an overview of recent developments in contextualized representations e g ELMo and BERT and explains their potential in NLP Throughout the book the reader can find both essential information for understanding a certain topic from scratch and a broad overview of the most successful techniques developed in the literature Linguistic Fundamentals for Natural Language Processing II Emily M. Bender, Alex Lascarides, 2022-06-01 Meaning is a fundamental concept in Natural Language Processing NLP in the tasks of both Natural Language Understanding NLU and Natural Language Generation NLG This is because the aims of these fields are to build systems that understand what people mean when they speak or write and that can produce linguistic strings that successfully express to people the intended content In order for NLP to scale beyond partial task specific solutions researchers in these fields must be informed by what is known about how humans use language to express and understand communicative intents The purpose of this book is to present a selection of useful information about semantics and pragmatics as understood in linguistics in a way that is accessible to and useful for NLP practitioners with minimal or even no prior training in linguistics Explainable Natural Language Processing Anders Søgaard, 2022-06-01 This book presents a taxonomy framework and survey of methods relevant to explaining the decisions and analyzing the inner workings of Natural Language Processing NLP models The book is intended to provide a snapshot of Explainable NLP though the field continues to rapidly grow The book is intended to be both readable by first year M Sc students and interesting to an expert audience The book opens by motivating a focus on providing a consistent taxonomy pointing out inconsistencies and redundancies in previous taxonomies It goes on to present i a taxonomy or framework for thinking about how approaches to explainable NLP relate to one another ii brief surveys of each of the classes in the taxonomy with a focus on methods that are relevant for NLP and iii a discussion of the inherent limitations of some classes of methods as well as how to best evaluate them Finally the book closes by providing a list of resources for further research on explainability Syntax-based Statistical Machine Translation Philip Williams, Rico Sennrich, Matt Post, Philipp Koehn, 2022-05-31 This unique book provides a comprehensive introduction to the most popular syntax based statistical machine translation models filling a gap in the current literature for researchers and developers in human language

technologies While phrase based models have previously dominated the field syntax based approaches have proved a popular alternative as they elegantly solve many of the shortcomings of phrase based models The heart of this book is a detailed introduction to decoding for syntax based models The book begins with an overview of synchronous context free grammar SCFG and synchronous tree substitution grammar STSG along with their associated statistical models It also describes how three popular instantiations Hiero SAMT and GHKM are learned from parallel corpora It introduces and details hypergraphs and associated general algorithms as well as algorithms for decoding with both tree and string input Special attention is given to efficiency including search approximations such as beam search and cube pruning data structures and parsing algorithms The book consistently highlights the strengths and limitations of syntax based approaches including their ability to generalize phrase based translation units their modeling of specific linguistic phenomena and their function of structuring the search space

Neural Network Methods for Natural Language Processing Yoav Goldberg, 2022-06-01 Neural networks are a family of powerful machine learning models This book focuses on the application of neural network models to natural language data The first half of the book Parts I and II covers the basics of supervised machine learning and feed forward neural networks the basics of working with machine learning over language data and the use of vector based rather than symbolic representations for words It also covers the computation graph abstraction which allows to easily define and train arbitrary neural networks and is the basis behind the design of contemporary neural network software libraries The second part of the book Parts III and IV introduces more specialized neural network architectures including 1D convolutional neural networks recurrent neural networks conditioned generation models and attention based models These architectures and techniques are the driving force behind state of the art algorithms for machine translation syntactic parsing and many other applications Finally we also discuss tree shaped networks structured prediction and the prospects of multi task learning

Bayesian Analysis in Natural Language Processing Shay Cohen, 2019-04-09 Natural language processing NLP went through a profound transformation in the mid 1980s when it shifted to make heavy use of corpora and data driven techniques to analyze language Since then the use of statistical techniques in NLP has evolved in several ways One such example of evolution took place in the late 1990s or early 2000s when full fledged Bayesian machinery was introduced to NLP This Bayesian approach to NLP has come to accommodate various shortcomings in the frequentist approach and to enrich it especially in the unsupervised setting where statistical learning is done without target prediction examples In this book we cover the methods and algorithms that are needed to fluently read Bayesian learning papers in NLP and to do research in the area These methods and algorithms are partially borrowed from both machine learning and statistics and are partially developed in house in NLP We cover inference techniques such as Markov chain Monte Carlo sampling and variational inference Bayesian estimation and nonparametric modeling In response to rapid changes in the field this second edition of the book includes a new chapter on representation learning and neural networks in the Bayesian context We also cover fundamental concepts in Bayesian statistics such as prior distributions conjugacy and generative modeling Finally we review some of the fundamental modeling techniques in NLP such as grammar modeling neural networks and representation learning and their use with Bayesian analysis

Bayesian Analysis in Natural Language

Processing, Second Edition Shay Cohen, 2022-05-31 Natural language processing NLP went through a profound transformation in the mid 1980s when it shifted to make heavy use of corpora and data driven techniques to analyze language. Since then the use of statistical techniques in NLP has evolved in several ways. One such example of evolution took place in the late 1990s or early 2000s when full fledged Bayesian machinery was introduced to NLP. This Bayesian approach to NLP has come to accommodate various shortcomings in the frequentist approach and to enrich it especially in the unsupervised setting where statistical learning is done without target prediction examples. In this book we cover the methods and algorithms that are needed to fluently read Bayesian learning papers in NLP and to do research in the area. These methods and algorithms are partially borrowed from both machine learning and statistics and are partially developed in house in NLP. We cover inference techniques such as Markov chain Monte Carlo sampling and variational inference, Bayesian estimation and nonparametric modeling. In response to rapid changes in the field, this second edition of the book includes a new chapter on representation learning and neural networks in the Bayesian context. We also cover fundamental concepts in Bayesian statistics such as prior distributions, conjugacy and generative modeling. Finally, we review some of the fundamental modeling techniques in NLP such as grammar modeling, neural networks and representation learning and their use with Bayesian analysis.

Learning to Rank for Information Retrieval and Natural Language Processing, Second Edition Hang Li, 2022-05-31 Learning to rank refers to machine learning techniques for training a model in a ranking task. Learning to rank is useful for many applications in information retrieval, natural language processing and data mining. Intensive studies have been conducted on its problems recently and significant progress has been made. This lecture gives an introduction to the area including the fundamental problems, major approaches, theories, applications and future work. The author begins by showing that various ranking problems in information retrieval and natural language processing can be formalized as two basic ranking tasks, namely ranking creation or simply ranking and ranking aggregation. In ranking creation, given a request, one wants to generate a ranking list of offerings based on the features derived from the request and the offerings. In ranking aggregation, given a request as well as a number of ranking lists of offerings, one wants to generate a new ranking list of the offerings. Ranking creation or ranking is the major problem in learning to rank. It is usually formalized as a supervised learning task. The author gives detailed explanations on learning for ranking creation and ranking aggregation, including training and testing, evaluation, feature creation and major approaches. Many methods have been proposed for ranking creation. The methods can be categorized as the pointwise, pairwise and listwise approaches according to the loss functions they employ. They can also be categorized according to the techniques they employ, such as the SVM based, Boosting based and Neural Network based approaches. The author also introduces some popular learning to rank methods in details. These include PRank, OC SVM, McRank, Ranking SVM, IR SVM, GBRank, RankNet, ListNet, ListMLE, AdaRank, SVM MAP, SoftRank, LambdaRank, LambdaMART, Borda Count, Markov Chain and CRanking. The author explains several example applications of

learning to rank including web search collaborative filtering definition search keyphrase extraction query dependent summarization and re ranking in machine translation A formulation of learning for ranking creation is given in the statistical learning framework Ongoing and future research directions for learning to rank are also discussed Table of Contents Learning to Rank Learning for Ranking Creation Learning for Ranking Aggregation Methods of Learning to Rank Applications of Learning to Rank Theory of Learning to Rank Ongoing and Future Work *Statistical Significance Testing for Natural Language Processing* Rotem Dror, Lotem Peled-Cohen, Segev Shlomov, Roi Reichart, 2022-06-01 Data driven experimental analysis has become the main evaluation tool of Natural Language Processing NLP algorithms In fact in the last decade it has become rare to see an NLP paper particularly one that proposes a new algorithm that does not include extensive experimental analysis and the number of involved tasks datasets domains and languages is constantly growing This emphasis on empirical results highlights the role of statistical significance testing in NLP research If we as a community rely on empirical evaluation to validate our hypotheses and reveal the correct language processing mechanisms we better be sure that our results are not coincidental The goal of this book is to discuss the main aspects of statistical significance testing in NLP Our guiding assumption throughout the book is that the basic question NLP researchers and engineers deal with is whether or not one algorithm can be considered better than another one This question drives the field forward as it allows the constant progress of developing better technology for language processing challenges In practice researchers and engineers would like to draw the right conclusion from a limited set of experiments and this conclusion should hold for other experiments with datasets they do not have at their disposal or that they cannot perform due to limited time and resources The book hence discusses the opportunities and challenges in using statistical significance testing in NLP from the point of view of experimental comparison between two algorithms We cover topics such as choosing an appropriate significance test for the major NLP tasks dealing with the unique aspects of significance testing for non convex deep neural networks accounting for a large number of comparisons between two NLP algorithms in a statistically valid manner multiple hypothesis testing and finally the unique challenges yielded by the nature of the data and practices of the field **Metaphor** Tony Veale, Ekaterina Shutova, Beata Beigman Klebanov, 2022-06-01 The literary imagination may take flight on the wings of metaphor but hard headed scientists are just as likely as doe eyed poets to reach for a metaphor when the descriptive need arises Metaphor is a pervasive aspect of every genre of text and every register of speech and is as useful for describing the inner workings of a black hole itself a metaphor as it is the affairs of the human heart The ubiquity of metaphor in natural language thus poses a significant challenge for Natural Language Processing NLP systems and their builders who cannot afford to wait until the problems of literal language have been solved before turning their attention to figurative phenomena This book offers a comprehensive approach to the computational treatment of metaphor and its figurative brethren including simile analogy and conceptual blending that does not shy away from their important cognitive and philosophical dimensions

Veale Shutova and Beigman Klebanov approach metaphor from multiple computational perspectives providing coverage of both symbolic and statistical approaches to interpretation and paraphrase generation while also considering key contributions from philosophy on what constitutes the meaning of a metaphor This book also surveys available metaphor corpora and discusses protocols for metaphor annotation Any reader with an interest in metaphor from beginning researchers to seasoned scholars will find this book to be an invaluable guide to what is a fascinating linguistic phenomenon

Automatic Detection of Verbal Deception Eileen Fitzpatrick,Joan Bachenko,Tommaso Fornaciari,2022-05-31 The attempt to spot deception through its correlates in human behavior has a long history Until recently these efforts have concentrated on identifying individual cues that might occur with deception However with the advent of computational means to analyze language and other human behavior we now have the ability to determine whether there are consistent clusters of differences in behavior that might be associated with a false statement as opposed to a true one While its focus is on verbal behavior this book describes a range of behaviors physiological gestural as well as verbal that have been proposed as indicators of deception An overview of the primary psychological and cognitive theories that have been offered as explanations of deceptive behaviors gives context for the description of specific behaviors The book also addresses the differences between data collected in a laboratory and real world data with respect to the emotional and cognitive state of the liar It discusses sources of real world data and problematic issues in its collection and identifies the primary areas in which applied studies based on real world data are critical including police security border crossing customs and asylum interviews congressional hearings financial reporting legal depositions human resource evaluation predatory communications that include Internet scams identity theft and fraud and false product reviews Having established the background this book concentrates on computational analyses of deceptive verbal behavior that have enabled the field of deception studies to move from individual cues to overall differences in behavior The computational work is organized around the features used for classification from gram through syntax to predicate argument and rhetorical structure The book concludes with a set of open questions that the computational work has generated

Grammatical Inference for Computational Linguistics Jeffrey Heinz,Colin de la Higuera,Menno van Zaanen,2022-06-01 This book provides a thorough introduction to the subfield of theoretical computer science known as grammatical inference from a computational linguistic perspective Grammatical inference provides principled methods for developing computationally sound algorithms that learn structure from strings of symbols The relationship to computational linguistics is natural because many research problems in computational linguistics are learning problems on words phrases and sentences What algorithm can take as input some finite amount of data for instance a corpus annotated or otherwise and output a system that behaves correctly on specific tasks Throughout the text the key concepts of grammatical inference are interleaved with illustrative examples drawn from problems in computational linguistics Special attention is paid to the notion of learning bias In the context of computational

linguistics such bias can be thought to reflect common ideally universal properties of natural languages This bias can be incorporated either by identifying a learnable class of languages which contains the language to be learned or by using particular strategies for optimizing parameter values Examples are drawn largely from two linguistic domains phonology and syntax which span major regions of the Chomsky Hierarchy from regular to context sensitive classes The conclusion summarizes the major lessons and open questions that grammatical inference brings to computational linguistics Table of Contents List of Figures List of Tables Preface Studying Learning Formal Learning Learning Regular Languages Learning Non Regular Languages Lessons Learned and Open Problems Bibliography Author Biographies

Statistical Methods for Annotation Analysis Silviu Paun,Ron Artstein,Massimo Poesio,2022-05-31 Labelling data is one of the most fundamental activities in science and has underpinned practice particularly in medicine for decades as well as research in corpus linguistics since at least the development of the Brown corpus With the shift towards Machine Learning in Artificial Intelligence AI the creation of datasets to be used for training and evaluating AI systems also known in AI as corpora has become a central activity in the field as well Early AI datasets were created on an ad hoc basis to tackle specific problems As larger and more reusable datasets were created requiring greater investment the need for a more systematic approach to dataset creation arose to ensure increased quality A range of statistical methods were adopted often but not exclusively from the medical sciences to ensure that the labels used were not subjective or to choose among different labels provided by the coders A wide variety of such methods is now in regular use This book is meant to provide a survey of the most widely used among these statistical methods supporting annotation practice As far as the authors know this is the first book attempting to cover the two families of methods in wider use The first family of methods is concerned with the development of labelling schemes and in particular ensuring that such schemes are such that sufficient agreement can be observed among the coders The second family includes methods developed to analyze the output of coders once the scheme has been agreed upon particularly although not exclusively to identify the most likely label for an item among those provided by the coders The focus of this book is primarily on Natural Language Processing the area of AI devoted to the development of models of language interpretation and production but many if not most of the methods discussed here are also applicable to other areas of AI or indeed to other areas of Data Science

Quality Estimation for Machine Translation Lucia Specia,Carolina Scarton,Gustavo Henrique Paetzold,2022-05-31 Many applications within natural language processing involve performing text to text transformations i e given a text in natural language as input systems are required to produce a version of this text e g a translation also in natural language as output Automatically evaluating the output of such systems is an important component in developing text to text applications Two approaches have been proposed for this problem i to compare the system outputs against one or more reference outputs using string matching based evaluation metrics and ii to build models based on human feedback to predict the quality of system outputs without reference texts Despite their popularity reference

based evaluation metrics are faced with the challenge that multiple good and bad quality outputs can be produced by text to text approaches for the same input. This variation is very hard to capture even with multiple reference texts. In addition, reference based metrics cannot be used in production e.g. online machine translation systems when systems are expected to produce outputs for any unseen input. In this book we focus on the second set of metrics so called Quality Estimation (QE) metrics where the goal is to provide an estimate on how good or reliable the texts produced by an application are without access to gold standard outputs. QE enables different types of evaluation that can target different types of users and applications. Machine learning techniques are used to build QE models with various types of quality labels and explicit features or learnt representations which can then predict the quality of unseen system outputs. This book describes the topic of QE for text to text applications covering quality labels, features, algorithms, evaluation uses and state of the art approaches. It focuses on machine translation as application since this represents most of the QE work done to date. It also briefly describes QE for several other applications including text simplification, text summarization, grammatical error correction and natural language generation.

The Top Books of the Year Ontology Based Interpretation Of Natural Language Christina Unger The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous compelling novels captivating the hearts of readers worldwide. Lets delve into the realm of bestselling books, exploring the fascinating narratives that have enthralled audiences this year.

Ontology Based Interpretation Of Natural Language Christina Unger : Colleen Hoover's "It Ends with Us" This touching tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover masterfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can succeed.

Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids captivating storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery.

Discover the Magic : Delia Owens "Where the Crawdads Sing" This captivating coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens crafts a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting.

These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered.

The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts.

The Secret History is a masterful and thrilling novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.

Ontology Based Interpretation Of Natural Language Christina Unger Introduction

In this digital age, the convenience of accessing information at our fingertips has become a necessity. Whether its research papers, eBooks, or user manuals, PDF files have become the preferred format for sharing and reading documents. However, the cost associated with purchasing PDF files can sometimes be a barrier for many individuals and organizations. Thankfully, there are numerous websites and platforms that allow users to download free PDF files legally. In this article, we will explore some of the best platforms to download free PDFs. One of the most popular platforms to download free PDF files is Project Gutenberg. This online library offers over 60,000 free eBooks that are in the public domain. From classic literature to

historical documents, Project Gutenberg provides a wide range of PDF files that can be downloaded and enjoyed on various devices. The website is user-friendly and allows users to search for specific titles or browse through different categories. Another reliable platform for downloading Ontology Based Interpretation Of Natural Language Christina Unger free PDF files is Open Library. With its vast collection of over 1 million eBooks, Open Library has something for every reader. The website offers a seamless experience by providing options to borrow or download PDF files. Users simply need to create a free account to access this treasure trove of knowledge. Open Library also allows users to contribute by uploading and sharing their own PDF files, making it a collaborative platform for book enthusiasts. For those interested in academic resources, there are websites dedicated to providing free PDFs of research papers and scientific articles. One such website is Academia.edu, which allows researchers and scholars to share their work with a global audience. Users can download PDF files of research papers, theses, and dissertations covering a wide range of subjects. Academia.edu also provides a platform for discussions and networking within the academic community. When it comes to downloading Ontology Based Interpretation Of Natural Language Christina Unger free PDF files of magazines, brochures, and catalogs, Issuu is a popular choice. This digital publishing platform hosts a vast collection of publications from around the world. Users can search for specific titles or explore various categories and genres. Issuu offers a seamless reading experience with its user-friendly interface and allows users to download PDF files for offline reading. Apart from dedicated platforms, search engines also play a crucial role in finding free PDF files.
