1) Explain principle of operation of a single phase transformer, and derive the e.m.f

" A transformer operates on the principle of electromagnetic induction as explained by Faraday's law.

Mutual Induction states that when two coils are inductively coupled and if current in one coil is changed uniformly, then an e.m.f gets induced in other coil.

According to Faraday's law, current flowing through primary produces flux Φ , and induces e.m.f E_1 in primary side. Core is provided for path for flux for secondary linkage coils.

Due to mutual induction of primary and secondary flux, due to mutual flux e.m.f E_2 is induced on secondary side.
