Book Basics Marine Estuarine Ecology Abhijit:

Basics of Marine and Estuarine Ecology Abhijit Mitra, Sufia Zaman, 2016-02-02 The book presents recent research on marine ecology in different parts of the world. It aims to shed light on relevant topics for budding marine ecologists. The blue soup of Planet Earth, which comprises both biotic and abiotic components, is essential to keeping the wheel of civilization running. Four major ecosystem service categories have been identified within this context: namely provisioning services such as water, food, mangrove timber, honey, fish, wax, fuel, wood, fodder, and bioactive compounds from marine and estuarine flora and fauna; regulating services such as the regulation of climate, coastal erosion, coral bleaching, and pollution; cultural services encompassing recreational tourism, spiritual, and other non-material benefits; and supporting services such as nutrient cycling and photosynthesis. These valuable services are obtained from various resources that must be conserved for the sake of humanity. This book presents data for each resource type not just in the form of a simple description but also through case studies that resulted from several research projects and pilot programs carried out in different parts of the world. Statistical tools were also used to critically analyze the influence of relevant hydrological parameters on the biotic community. Advanced research in marine and estuarine ecology is based on the use of sophisticated instruments, sampling, precision statistical tools, etc., which have also been highlighted in the book.

Estuarine Acidification Abhijit Mitra, Sufia Zaman, 2021-08-24 This book provides a cross-sectoral, multi-disciplinary assessment of different problems associated with estuarine acidification, with special thrust on mangrove-dominated Indian Sundarban estuaries. The arms of ocean acidification have extended to coastal and estuarine waters where a wide spectrum of biodiversity thrives with unique adaptation. Extending several ecosystem services, the impact of acidification in these areas is a matter of concern as acidification potentially has more immediate effects on the health of estuaries and inshore regions as well as regional economies. Ground zero data collected for more than three decades have made the book stand on a strong base.

Blue Economy in Indian Sundarbans Abhijit Mitra, Sufia Zaman, Prosenjit Pramanick, 2022-08-28 This book provides a cross-sectoral, multidisciplinary assessment of the major verticals of Blue Economy relevant to the mangrove ecosystem in Indian Sundarbans, which is a deltaic complex at the apex of Bay of Bengal. This book evaluates the feasibility of Blue Economy considering the natural resource base in this mangrove-dominated deltaic complex. Chapter 1 discusses the need of expanding different marine and estuarine-oriented verticals of Blue Economy as the land resources are gradually becoming depleted. Chapter 2 highlights the wide spectrum of biotic and abiotic resources of the Indian Sundarbans, which can serve as the strong foundation of expanding Blue Economy in the region. Chapter 3 highlights several mangrove-based livelihoods that are not only innovative but may present new opportunities to initiate cottage industries. Chapter 4 highlights the threats associated with Blue Economy in Indian Sundarbans, like sea level rise, acidification of water, weather extremes, pollution, over-exploitation of natural resources, etc., along with ground zero environmental data collated over three decades. Chapter 5 offers several solutions to combat the

threats to regional Blue Economy emphasizing both technology and policy based management The book attempts to align the proliferation of different sectors of Blue Economy in the framework of Indian Sundarbans Mangrove Carbon Trading in the Lower Gangetic Delta Abhijit Mitra, Sufia Zaman, Prosenjit Pramanick, Sana Ahmed, 2024-12-14 True mangrove flora and their associates in the lower Gangetic region are noted for their wide spectrum of ecosystem services in which carbon storage and sequestration by the forest is one of the most important components Many researchers are updating the carbon repository of the lower Gangetic delta mangroves with the aim to ascertain their role to reduce the carbon dioxide level of the near surface atmosphere However due to difficulty in assessment marketing and lack of clarity over ownership of natural resources the mangrove based carbon trading system has not yet crystallized There is an estimated 13.76 Mha of mangrove forests world wide approximately 20% 2.6 Mha of which is potentially investible for carbon finance projects based on the probability of imminent threat The magnitude and the variability of threats to which the mangroves of the lower Gangetic delta are exposed to have made the trading process more complicated In addition gaps also exist between the national government policy and the trading of the blue carbon projects which has kept the future of such projects remain on hold The authors put forward the views that the creation of more financial facilities for restoration and expansion of blue carbon preferably mangroves with the involvement of the local communities can provide the initial capital involved in developing mangrove based carbon projects This includes the costs of conducting feasibility studies implementing capacity building programs monitoring the health of the mangrove plantation restoration on regular basis and creating mangrove based alternative livelihood programs that will support island dwellers of the region in order to accelerate the magnitude of mangrove based carbon projects leading to growth of the mangrove trading market *Estuarine Pollution in the Lower Gangetic Delta* Abhijit Mitra, 2018-09-21 This book critically analyzes the water quality in the lower Gangetic delta and examines the environmental conditions and physical processes operating in this rich ecosystem Readers with an interest in environmental science geography oceanography marine biology environmental biology aquatic pollution and ecology will find the research presented here most appealing Readers will discover critical aspects of the chemistry of the estuarine water particularly that of Hooghly and Matla estuaries in the lower stretch of the delta region along with the causes and effects of pollution in and around this region Particular attention is given to the bioaccumulation of conservative pollutants in edible fishes and floral communities thriving in this region Several case studies are also incorporated to highlight the vulnerability of pollution in this region Chapters also address the impacts of climate change specifically acidification on the concentration and behavior of conservative pollutants Finally the book highlights some mitigation measures at the technology and policy level to minimize the negative impacts posed by different groups of pollutants on the estuarine biodiversity **Practical Marine and Estuarine Ecology** Wageningen University Aquatic Ecology and Water Quality Management Group, 2011 *Introduction Marine and Estuarine Ecology* R. McLusky, Michael Elliott, 2004-04-29 For the inhabitants of many of the world's major towns and cities estuaries provide their first and nearest glimpse of a natural habitat. Despite the attempts of man to pollute or reclaim it, the estuarine ecosystem continues to provide a fascinating insight into a natural world where energy is transformed from sunlight into plant material and then through the steps of a food chain is converted into a rich food supply for birds and fish. The book provides a concise, readable introduction to estuarine ecology. First published in 1981, it soon established itself as the principle textbook of choice in the UK, NW Europe. This new edition builds upon the strengths of the earlier editions but has been thoroughly revised throughout. The new co-author brings a human impact dimension to the revised book. It is written for advanced undergraduate and graduate students, particularly taught masters who have had a general ecology course but no further training in estuarine science. It will be useful to both professional researchers and practical managers in marine ecology and environmental science who seek a compact but comprehensive introduction to estuarine ecology. *Estuarine Pollution in the Lower Gangetic Delta* Abhijit Mitra (Marine biology teacher), 2019 This book critically analyzes the water quality in the lower Gangetic delta and examines the environmental conditions and physical processes operating in this rich ecosystem. Readers with an interest in environmental science, geography, oceanography, marine biology, environmental biology, aquatic pollution and ecology will find the research presented here most appealing. Readers will discover critical aspects of the chemistry of the estuarine water, particularly that of Hooghly and Matla estuaries in the lower stretch of the delta region, along with the causes and effects of pollution in and around this region. Particular attention is given to the bioaccumulation of conservative pollutants in edible fishes and floral communities thriving in this region. Several case studies are also incorporated to highlight the vulnerability of pollution in this region. Chapters also address the impacts of climate change, specifically acidification, on the concentration and behavior of conservative pollutants. Finally, the book highlights some mitigation measures at the technology and policy level to minimize the negative impacts posed by different groups of pollutants on the estuarine biodiversity. *Estuarine Ecology* John W. Day, Jr., W. Michael Kemp, Alejandro Yáñez-Arancibia, Byron C. Crump, 2012-11-19 Estuaries are among the most biologically productive ecosystems on the planet, critical to the life cycles of fish, other aquatic animals, and the creatures which feed on them. *Estuarine Ecology*, Second Edition, covers the physical and chemical aspects of estuaries, the biology and ecology of key organisms, the flow of organic matter through estuaries, and human interactions such as the environmental impact of fisheries on estuaries and the effects of global climate change on these important ecosystems. Authored by a team of world experts from the estuarine science community, this long-awaited full color edition includes new chapters covering phytoplankton, seagrasses, coastal marshes, mangroves, benthic algae, Integrated Coastal Zone Management techniques, and the effects of global climate change. It also features an entirely new section on estuarine ecosystem processes, trophic webs, ecosystem metabolism, and the interactions between estuaries and other ecosystems such as wetlands and marshes. **Marine and Estuarine Ecology** Bobby N.
