Book Stargazing Program Beginners Pocket Astronomers:

A Stargazing Program for Beginners Jamie Carter, 2015-11-20 Sets out a simple month by month program to reveal all of the night sky's biggest and most beautiful secrets in just one year and with only a few hours of stargazing each month. By investing just an hour a week and 50 in binoculars it's possible to learn a few simple techniques and quickly gain a real insight into the night sky's ever-changing patterns and what they tell us about Earth, the seasons, and ourselves. Searching more for a learned appreciation of nature and our exact place within the cosmos than academic scientific knowledge, science and travel writer Jamie Carter takes the reader on a 12-month tour of the night sky's incredible annual rhythms that say so much about Earth. During the journey, he learns about the celestial mechanics at work in the skies above that are to the beginner almost beyond belief. As well as the vital constellations and clusters and the weird and wonderful nebulas, he searches out dark sky destinations across the globe that help increase knowledge and give a new perspective on familiar night sky sights. On the journey, he witnesses a solar eclipse and grapples with star charts, binoculars, smartphone apps, telescopes, spots satellites, and attempts basic astro photography. By year's end, the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing, what time it is, where all the planets are, and even where the Galactic Center Point is.

Astronomy with a Home Computer Neale Monks, 2006-03-30 Here is a one-volume guide to just about everything computer-related for amateur astronomers. Today's amateur astronomy is inextricably linked to personal computers. Computer-controlled go-to telescopes are inexpensive. CCD and webcam imaging make intensive use of the technology for capturing and processing images. Planetarium software provides information and an easy interface for telescopes. The Internet offers links to other astronomers' information and software. The list goes on and on. Find out here how to choose the best planetarium program; are commercial versions really better than freeware? Learn how to optimize a go-to telescope or connect it to a laptop. Discover how to choose the best webcam and use it with your telescope. Create a mosaic of the Moon or high-resolution images of the planets. *Astronomy with a Home Computer* is designed for every amateur astronomer who owns a home computer, whether it is running Microsoft Windows, Mac OS, or Linux. It doesn't matter what kind of telescope you own; either a small refractor is just as useful as a big go-to SCT for most of the projects in this book.
