Materials Technology Gaps in Metal Additive Manufacturing Cynthia Waters, 2018-04-24 Metal additive manufacturing MAM is an exciting emergent technology that offers the possibility of democratizing metal manufacturing worldwide Many believe it has the ability to revolutionize product manufacturing on a global scale MAM will require a considerable design shift for manufacturers and hence will disrupt conventional thinking and require adaptation Visionaries in the mobility industry can see the transformative possibilities after materials considerations are addressed Materials Technology Gaps in Metal Additive Manufacturing introduces the reader to various opportunities and relationships in the study of material technologies involved in metal based additive manufacturing of aerospace and automotive parts Everything starts and ends with the material feedstock and the intermediate processes that affect a particular metal Each of the choices in the complex integrated MAM system impacts final part properties Edited by Dr Cynthia K Waters from North Carolina A T State University Materials Technology Gaps in Metal Additive Manufacturing is a highly curated collection of 10 seminal SAE International papers They discuss the various technologies involved in MAM and draw attention to the materials needs in each of the situations addressed The main topics included in Materials Technology Gaps in Metal Additive Manufacturing are Process design and material modeling Metal powder selection and study Additive processing parameters effect on materials properties As more interdependencies of material properties and possible manufacturing processes evolve compatibility interdependence questions if the specific manufacturing process is capable to create the required geometry will also arise Materials Technology Gaps in Metal Additive Manufacturing brings innovative ways to address these and other challenges that are always present in the adoption of novel technologies

Design for Additive Manufacturing Dhruv Bhate, 2018-07-20 In the coming decades the growth in AM will likely be driven by production parts that leverage this increase in design freedom to manufacture parts of higher performance and improved material utilization Contrary to popular opinion however AM processes do have their constraints and limitations not everything can be manufactured with AM and even when it is feasible

not everything should Design for Additive Manufacturing Concepts and Considerations for the Aerospace Industry edited by Dr Dhruv Bhate is a collection of ten seminal SAE International technical papers which cover AM from the perspective of the appropriateness should and feasibility can of using AM for manufacturing of parts and tooling Although AM technologies have been around for three decades many in the industry believe that we are merely at the beginning of the revolution in the design driven aspects of this technology Indeed half the papers in this selection were published only in the past two years and all but one in the past decade When it comes to design for AM it is a safe bet that the best is yet to be
