

PHYSICS TOPIC 1- MOVING ABOUT

1. Vehicles do not typically travel at a constant speed

Identify that a typical journey involves speed changes

Distinguish between the instantaneous and average speed of vehicles and other bodies

- Speed is the rate of change of distance over time, a measure of how quickly distance is covered
- In typical journey in any form of transport, it involves starting, stopping and possible speed changes throughout the journey. Hence, our speed is rarely constant in a journey

$$V_{av} = \frac{D_{total}}{T_{total}}$$

V_{av} = average speed
 D_{total} = total distance covered
 T_{total} = total time taken

- Average speed is how quickly a total distance is covered over a total time
- Instantaneous speed is the speed of an object at any given point. Instantaneous speed is more accurate since in reality speed is constantly changing over a journey
- Eg) A car starts at rest, the travels at 30km/h for the first hour, then at 60km/h for the second hour
 - The instantaneous speed:
 At the beginning: 0km/h
 After half an hour: 30km/hr
 - Average speed of entire trip = 90km/2hr = 45km/h

Distinguish between scalar and vector quantities in equations

- There are two types of quantities in physics:
 - Scalar quantity: has magnitude only
 - Vector quantity: has both magnitude and direction
- When dealing with vectors, the direction must also be stated in answers

Scalar	Vector
Distance	Displacement
Speed	Velocity
Volume	Acceleration
Mass	Fields
Length	Forces
