[Real-Time UNIX® Systems](#) Borko Furht, Dan Grostick, David Gluch, Guy Rabbat, John Parker, Meg McRoberts, 2012-12-06 A growing concern of mine has been the unrealistic expectations for new computer related technologies introduced into all kinds of organizations Unrealistic expectations lead to disappointment and a schizophrenic approach to the introduction of new technologies The UNIX and real time UNIX operating system technologies are major examples of emerging technologies with great potential benefits but unrealistic expectations Users want to use UNIX as a common operating system throughout large segments of their organizations A common operating system would decrease software costs by helping to provide portability

and interoperability between computer systems in today's multivendor environments. Users would be able to more easily purchase new equipment and technologies and cost effectively reuse their applications. And they could more easily connect heterogeneous equipment in different departments without having to constantly write and rewrite interfaces. On the other hand, many users in various organizations do not understand the ramifications of general purpose versus real time UNIX. Users tend to think of real time as a way to handle exotic heart monitoring or robotics systems. Then these users use UNIX for transaction processing and office applications and complain about its performance, robustness, and reliability. Unfortunately, the users don't realize that real time capabilities added to UNIX can provide better performance, robustness, and reliability for these non real time applications. Many other vendors and users do realize this, however. There are indications even now that general purpose UNIX will go away as a separate entity. It will be replaced by a real time UNIX. General purpose UNIX will exist only as a subset of real time UNIX.

**WebSphere Application Server V7: Competitive Migration Guide** Santos Bento da Silva, Joao Emilio, Kiran Mantripragada, Vasfi Gucer, Kurtcebe Eroglu, Hamdy Eed, Fabio Xavier Albertoni, IBM Redbooks, 2010-08-20. This IBM Redbooks publication helps you plan and execute the migration of J2EE applications developed for Oracle WebLogic Server, JBoss, GlassFish, and Apache Tomcat so that they run on WebSphere Application Server V7. This book provides detailed information to plan migrations, suggested approaches for developing portable applications, and migration working examples for each of the platforms from which we migrated. It is not our intention to provide a feature by feature comparison of these application servers versus WebSphere Application Server V7 or to argue the relative merits of the products, but to produce practical technical advice for developers who have to migrate applications from these vendors to WebSphere Application Server V7. The book is intended as a migration guide for IT specialists who are working on migrating applications written for other application servers to WebSphere Application Server V7.
