Congenital Heart Diseases: The Broken Heart Silke Rickert-Sperling,Robert G. Kelly,David J. Driscoll,2015-12-18 This book provides comprehensive insights into congenital heart disease from embryonic development through to clinical features including human genetics and our current knowledge of the underlying molecular pathways It is divided into three parts an introduction to the development of the heart and its vessels an overview of the molecular pathways affecting the development of various cardiovascular structures and a main section focusing on the different types of structural and nonstructural congenital heart diseases including their clinical features underlying genetic alterations and related animal models and pathways Taken together these chapters which were written by and for clinicians and researchers provide an integrated and cutting edge resource for all those who want to learn more about both the clinical aspects and the genetic and molecular basis of congenital heart disease

Advanced Protocols for Animal Transgenesis Shirley Pease,Thomas L. Saunders,2011-08-30 This laboratory manual published in cooperation with the International Society for Transgenic Technology ISTT provides almost all current methods that can be applied to the creation and analysis of genetically modified animals The chapters have been contributed by leading scientists who are actively using the technology in their laboratories Based on their first hand experience the authors also provide helpful notes and troubleshooting sections Topics range from standard techniques such as pronuclear microinjection of DNA to more sophisticated and modern methods such as the derivation and establishment of embryonic stem ES cell lines with defined inhibitors in cell culture medium In addition related topics with relevance to the field are addressed including global web based resources legal issues colony management shipment of mice and embryos and the three R s refinement reduction and replacement

Generation and Interpretation of Morphogen Gradients James Briscoe,Peter Anthony Lawrence,Jean-Paul Vincent,2010 Signalling by morphogens such as the Hedgehog family Notch Wingless Wnt and various growth factors is essential during embryogenesis The establishment of concentration gradients of these morphogens plays a key role during developmental patterning in all multicellular organisms assuring that distinct cell tissue types and organs appear at the right place in the right time during embryogenesis Regulation of morphogen synthesis trafficking and diffusion are all known to play a part in setting up these

gradients and a complex web of signaling mechanisms ensures that specific responses occur at the correct threshold concentration in the recipient cells whose fate depends on these morphogens
