Multidimensional Poverty Measurement And Analysis:

Multidimensional Poverty Measurement and Analysis Sabina Alkire, James Foster, Suman Seth, Maria Emma Santos, José Manuel Roche, Paola Ballon, 2015-06-04 Multidimensional poverty measurement and analysis is evolving rapidly. Notably, it has informed the publication of the Multidimensional Poverty Index (MPI) estimates in the Human Development Reports of the United Nations Development Programme since 2010 and the release of national poverty measures in Mexico, Colombia, Bhutan, the Philippines, and Chile. The academic response has been similarly swift, with related articles published in both theoretical and applied journals. The high and insistent demand for in-depth and precise accounts of multidimensional poverty measurement motivates this book, which is aimed at graduate students in quantitative social sciences, researchers of poverty measurement, and technical staff in governments and international agencies who create multidimensional poverty measures. The book is organized into four elements. The first introduces the framework for multidimensional measurement and provides a lucid overview of a range of multidimensional techniques and the problems each can address. The second part gives a synthetic introduction of counting approaches to multidimensional poverty measurement and provides an in-depth account of the counting multidimensional poverty measurement methodology developed by Alkire and Foster, which is a straightforward extension of the well-known Foster-Greer-Thorbecke poverty measures that had a significant and lasting impact on income poverty measurement. The final two parts deal with the pre-estimation issues such as normative choices and distinctive empirical techniques used in measure design and the post-estimation issues such as robustness tests, statistical inferences, comparisons over time, and assessments of inequality among the poor.

Multidimensional Poverty Measurement and Analysis Sabina Alkire, 2015. This working paper presents the normative, empirical, and policy motivations for focusing on multidimensional poverty measurement and analysis in general and one measurement approach in particular. The fundamental normative motivation is to create effective measures that better reflect poor people's experience so that policies using such measures reduce poverty. Such measures are needed because empirically, income-poor households are surprisingly not well matched to households carrying other basic deprivations like malnutrition. Also, the trends of income and non-income deprivations are not matched, and nor does growth ensure the reduction of social deprivations. And a dashboard overlooks the interconnection between deprivations which people experience and policies seek to address. Turning to policy, we close by discussing how the Alkire-Foster methodology we present in Working Paper 86, *Multidimensional Poverty Measurement and Analysis*, Chapter 5, The Alkire-Foster Counting Methodology, may be used.

Multidimensional Poverty Measurement and Analysis Sabina Alkire, 2015. This chapter provides a systematic overview of the Alkire-Foster multidimensional measurement methodology with an emphasis on the Adjusted Headcount Ratio. The chapter is divided into seven sections. The first shows how this measure combines the practical appeal of the counting tradition with the rigor of the axiomatic one. The second sets out the identification of who is poor using the dual cutoff approach, and the third outlines the

aggregation method used to construct the Adjusted Headcount Ratio In the fourth we take stock and present the main distinctive characteristics of the Adjusted Headcount Ratio whereas the fifth section presents its useful consistent partial indices or components To illustrate we present a case study using the global Multidimensional Poverty Index MPI in the sixth section The final section presents the members of the AF class of measures that can be constructed in less common situations where data are cardinal

Multidimensional Poverty Measurement and Analysis Sabina Alkire, José Manuel Roche, Paola Ballon, James Foster, Maria Emma Santos, Suman Seth, 2015 A systematic conceptual theoretical and methodological introduction to multi dimensional poverty measurement and analysis It provides a lucid overview of the problems that a range of multidimensional techniques can address and sets out a synthetic introduction of counting and axiomatic approaches to multidimensional poverty measurement

Multidimensional Poverty Measurement and Analysis Sabina Alkire, 2015 This chapter introduces empirical issues that are distinctive to counting based multidimensional poverty methodologies It is crucial that indicators accurately reflect deprivations at the individual level and that all indicators be transformed to reflect deprivations in the chosen unit of analysis This chapter is divided into four sections The first section very briefly the different types of data sources used for multidimensional measures censuses administrative records and household surveys as well as outstanding data needs The second discusses distinctive issues to be considered when constructing the indicators to include in a multidimensional poverty measure The third section presents some basic descriptive analytical tools that can prove helpful in exploring the relationships between different indicators detecting redundancy and informing measure design and analysis

Multidimensional Poverty Measurement and Analysis Sabina Alkire, 2015 The measurement of poverty involves identification the fundamental step of deciding who is to be considered poor A counting approach is one way to identify the poor in multidimensional poverty measurement which entails the intuitive procedure of counting the number of dimensions in which people suffer deprivation Atkinson 2003 advised an engagement between multidimensional measures from social welfare and the counting approaches due to the widespread policy use of the latter This chapter reviews applications of the counting methods in the history of poverty measurement We focus on empirical studies since the late 70s which developed relatively independently of each other in two regions In Latin America applications of the Unsatisfied Basic Needs Approach were widespread often using census and survey data European work drew on concepts of social exclusion and inclusion and now include national and European initiatives

Multidimensional Poverty Measurement and Analysis Sabina Alkire, 2015 After a measurement methodology has been chosen the design of poverty measures whether unidimensional or multidimensional require a series of normative choices These choices relate to the space of the measure its purpose unit of identification and analysis dimensions indicators deprivation cutoffs weights and poverty line The normative contribution is not simply philosophical it has a practical aim to motivate action This entails reasoned assessment of multiple considerations including feasibility technical and statistical

strength ease of communication and legitimacy This chapter describes each of these normative choices in the context of multidimensional poverty measurement design It clarifies the implications of each choice illustrates interconnections between them and outlines alternative ways that these choices might be understood made and justified *Multidimensional Poverty Measurement and Analysis* Sabina Alkire,2015 For meaningful policy analysis it is important not only to look at overall poverty and compare countries or regions at a single point in time but also to understand the distribution among the poor the disparity across subgroups and the dynamics of poverty This extends the methodological toolkit presented in Chapter 5 First we present a new measure of inequality among the poor and its axiomatic justification The same measure a form of variance can be extended to analyse horizontal inequalities which are disparities across different population subgroups The next two sections provide methodological extensions that are required for inter temporal analysis of poverty using repeated cross sectional data and for the analysis of dynamic subgroups The last section elaborates a measure chronic multidimensional poverty which uses a counting approach both across dimensions and across periods and provide its consistent partial indices including a new statistic on the duration of poverty *Multidimensional Poverty Measurement and Analysis* Sabina Alkire,2015 This chapter presents a constructive survey of the major existing methods for measuring multidimensional poverty Many measures were motivated by the basic needs approach the capability approach and the social inclusion approach among others This chapter reviews Dashboards the composite indices approach Venn diagrams the dominance approach statistical approaches fuzzy sets and the axiomatic approach The first two methods dashboard and composite indices are implemented using aggregate data from different sources ignoring the joint distribution of deprivations The other methods reflect the joint distribution and are implemented using data in which information on each dimension is available for each unit of analysis After outlining each method we provide a critical evaluation by discussing its advantages and disadvantages

Multidimensional Poverty Measurement and Analysis Sabina Alkire,2015 This working paper introduces the notation and basic concepts that are used throughout the OPHI Working Papers 82 91 The Paper has five sections First we review unidimensional poverty measurement with particular attention to the well known Foster Greer Thorbecke measures of income poverty as many methods presented in OPHI Working Paper 84 Chapter 3 Overview of Methods for Multidimensional Poverty Assessment as well as the measure presented in OPHI Working Papers 86 90 Chapters 5 9 are based on these measures The second section introduces the notation and basic concepts for multidimensional poverty measurement that are used in subsequent chapters Third we define indicators scales of measurement and fourth address issues of comparability across people and dimensions The fifth section systematically explains different properties that have been proposed in axiomatic approaches to multidimensional poverty measurement which enable the analyst to understand the ethical principles embodied in a measure and to be aware of the direction of change they will exhibit under certain transformations Multidimensional Poverty Measurement and Analysis Sabina Alkire,2015 The design of a poverty

measure involves the selection of a set of parameters and poverty figures. In most cases the measures are estimated from sample surveys. This raises the question of how conclusive particular poverty comparisons are subject to both the set of selected parameters or variations within a plausible range and the sample datasets. This chapter shows how to apply dominance and rank robustness tests to assess comparisons as poverty cutoffs and other parameters change. It presents ingredients of statistical inference including standard errors, confidence intervals, and hypothesis tests. And it discusses how robustness and statistical inference tools can be used together to assert concrete policy conclusions. An appendix presents methods for computing standard errors including the bootstrapped standard errors. *Fuzzy Set Approach to*

Multidimensional Poverty Measurement Achille A. Lemmi, Gianni Betti, 2006-12-06 Recent theoretical and empirical studies have concluded that in order to be accurate poverty and deprivation must be measured within a multidimensional framework that is consistent, efficient, and statistically robust. The fuzzy sets approach to poverty measurement was developed in the early 1990s and continues to be refined by scholars of economics and sociology who find the traditional monetary-only indicators to be inadequate and arbitrary. This volume brings together advanced thinking on the multidimensional measurement of poverty, including the theoretical background, applications to cross sections using contemporary European examples, and longitudinal aspects of multidimensional fuzzy poverty analysis that pay particular attention to the transitory or impermanent conditions that often occur during transitions to market economies. This book will be of interest to scholars and researchers and will be a useful text on poverty for advanced students in applied statistics, urban planning, economics, and sociology.

Multidimensional Poverty Measurement Udaya Wagle, 2009-04-05 Conceptualization and measurement of poverty have traditionally relied on purely economic approaches with income or consumption as the only indicator. Multidimensional approaches have increasingly been used to understand poverty but have yet to be fully operationalized. This book uses factor analysis and structural equations modelling to develop a multidimensional framework that integrates capability and social inclusion as additional poverty indicators. The empirical relevance of this methodological contribution is demonstrated through its application in the United States and Nepal. The proposed approach not only helps to identify different categories of the poor but also to more accurately target resources and policies of poverty alleviation. The book will therefore be an important reference for professionals in development agencies as well as for poverty and policy researchers.

Research Handbook on Measuring Poverty and Deprivation Jacques Silber, 2023-03-02 Encompassing chapters that address both unidimensional and multidimensional poverty, this timely Research Handbook explores all aspects of poverty and deprivation measurement, not only detailing broad issues but also scrutinising specific domains and aspects of poverty such as health, energy, and housing. Its succinct and highly focussed chapters, written by a diverse range of authors, employ a combination of theoretical and empirical methodologies to offer well-rounded explorations of complex topics. *Research Handbook on Poverty and Inequality* Udaya R. Wagle, 2023-05-09 Covering global comparative and single country contexts

this Research Handbook presents wide ranging cutting edge research on poverty and inequality It maps out international trends in poverty and inequality and explores the key conceptual and operational frameworks practical analyses and policy applications and outcomes *Quantitative Approaches to Multidimensional Poverty Measurement* N. Kakwani,J. Silber,2008-02-21 This book is written in light of the latest developments in the field of multidimensional poverty measurement It includes clear presentations of more than a dozen different quantitative techniques and provides empirical illustrations based on data sources from developed or developing countries **Multidimensional Poverty Measurement** Xiaolin Wang,2022-05-19 This book addresses and compensates for the lack of poverty measurement research in China With regard to the multi dimensional measurement of poverty it is clear that the situation of Chinese farmers is problematic in terms of five major aspects sanitation facilities health insurance durable consumer goods productive assets and modern fuels Based on these criteria the book provides a clear direction for policy intervention to comprehensively improve farmers standard of living and tackle the key problems of poverty alleviation and development in the region In addition its analysis of poverty among ethnic minorities the elderly and children offers valuable reference material for poverty alleviation and the development of special groups *Analysis of Socio-Economic Conditions* Gianni Betti,Achille Lemmi,2021-03-22 Showcasing fuzzy set theory this book highlights the enormous potential of fuzzy logic in helping to analyse the complexity of a wide range of socio economic patterns and behaviour The contributions to this volume explore the most up to date fuzzy set methods for the measurement of socio economic phenomena in a multidimensional and or dynamic perspective Thus far fuzzy set theory has primarily been utilised in the social sciences in the field of poverty measurement These chapters examine the latest work in this area while also exploring further applications including social exclusion the labour market educational mismatch sustainability quality of life and violence against women The authors demonstrate that real world situations are often characterised by imprecision uncertainty and vagueness which cannot be properly described by the classical set theory which uses a simple true false binary logic By contrast fuzzy set theory has been shown to be a powerful tool for describing the multidimensionality and complexity of social phenomena This book will be of significant interest to economists statisticians and sociologists utilising quantitative methods to explore socio economic phenomena *Poverty and Well-Being in East Africa* Almas Heshmati,2016-04-30 This volume is a collection of selected studies on poverty and well being in East Africa Using a multidimensional approach the authors hope to provide a broad view of poverty and a thorough account of the variables that contribute to it As opposed to traditional studies of poverty which focus mainly on material well being this volume includes criteria such as material standard of living health education housing personal security access to information freedom participation in organization corruption trust and employment The studies highlighted in this volume are grouped into the following four research areas child poverty and malnutrition dynamics and determinants of poverty multidimensional measures of poverty and energy environment poverty relationships Together these studies provide a comprehensive picture

of the state of multidimensional poverty its measurement causal factors and policies and practices in Burundi Cameroon Ethiopia Kenya Madagascar Malawi Mozambique Nigeria Rwanda and Tanzania The methodology utilized in the studies is diverse as well ranging from econometric analysis to decision theory to neoclassical growth models This book is geared towards students and researchers interested in economic development welfare and poverty in Africa as well as policy makers and members of NGOs and international aid agencies **Routledge International Handbook of Poverty** Bent Greve, 2019-09-25 The first of the UN Millennium Goals was to reduce extreme poverty and in 2014 it was halved compared to 1990 and now the goal is to eradicate poverty and hunger by 2030 The reduction in poverty is to a high degree the consequence of the rapid economic development in a few countries especially China but in many countries around the globe poverty is still at a high level and is influencing societies overall development It is against this background that this Handbook provides an up to date analysis and overview of the topic from a large variety of theoretical and methodological angles Organised into four parts the Handbook provides knowledge on what poverty is how it has developed and what type of policies might be able to succeed in reducing poverty Part I investigates conceptual issues and relates concepts to people's relative position in society and the understanding of justice Part II shows how poverty has developed It combines existing empirical knowledge with regional national understandings of the issue of poverty Part III analyses policies and interventions with the aim of reducing or alleviating poverty within a national as well as global context It includes a variety of countries and examples Finally Part IV tells us what can be done about poverty what instruments are available to end poverty as we know it today This volume will be an invaluable reference book for students and scholars throughout the social sciences particularly in sociology social policy public policy development studies international relations and politics
