experts in the paper's topic. As a consequence, reviews were usually quite extensive and contained many suggestions for improvements. I would like to thank all the members of the Program Committee for their hard work, which I am sure contributed to improving the quality of the final articles.

The Complete Sourcebook on Children's Software Children's Software Review, 2001-03. 5000 critical reviews of CDs, videogames, smart toys for ages 1 to 16. *Public Library Programs and Services for Midlife and Beyond* Reneé K. Bennett-Kapusniak, 2018-06-01. Inspired by trends in U.S. public libraries, this book teaches librarians how to create a welcoming environment that enriches, enlightens, and engages their library's growing aging community. The number of adults aged 50 coming to public libraries is steadily increasing. These patrons include active, healthy, tech-savvy professionals, people who have little or no computer training, retirees, travelers, and those who have age-related health and behavior issues. Public libraries have an opportunity to provide services for this growing and varied group. This book teaches librarians how to develop and expand adult public library programming and services, turning their library into a welcoming environment for the aging community. *Public Library Programs and Services for Midlife and Beyond* offers practical examples in areas including community collaboration, outreach, marketing, engagement, technology, and social media funding and lifelong learning. It also incorporates up-to-date findings from the ALA's Guidelines for Library Services with 60 Audience Best Practices. Examples gathered by the author from extensive interviews with public librarians and directors illustrate what a range of libraries is successfully doing for the midlife and beyond community and encourage creative thinking about new programs and services.

Visual Informatics: Bridging Research and Practice Halimah Badioze Zaman, Peter Robinson, Maria Petrou, Patrick Olivier, Heiko Schröder, 2009-11-14. Visual informatics is a field of interest not just among the information technology and computer science community but also other related fields such as engineering, medical, and health informatics, and education, starting in the early 1990s. Recently, the field is gaining more attention from researchers and industry. It has become a multidisciplinary and transdisciplinary field related to research areas such as computer vision, visualization, information visualization, real-time image processing, medical image processing, image information retrieval, virtual reality, augmented reality, pervasive visual mathematics, 3D graphics, multimedia fusion, visual data mining, visual ontology, as well as services and visual culture. Various efforts have been vested in different research, but operationally, many of these systems are not prominent in the mass market, and thus knowledge and research on these phenomena within the mentioned areas need to be shared and disseminated. It is for this reason that the Visual Informatics Research Group from Universiti kebangsaan Malaysia (UKM) decided to spearhead this initiative to bring together experts in this very diversified but important research area so that more concerted efforts can be undertaken, not just within the visual informatics community in Malaysia but from other parts of the world, namely Asia, Europe, Oceania, and USA. This first International Visual Informatics Conference (IVIC 2009) was conducted collaboratively by the visual informatics research community from the various public and private institutions of higher learning in Malaysia and hosted by UKM. **Making**
