 Amoore, 2020-05-01 In *Cloud Ethics* Louise Amoore examines how machine learning algorithms are transforming the ethics
 and politics of contemporary society Conceptualizing algorithms as ethicopolitical entities that are entangled with the data
 attributes of people Amoore outlines how algorithms give incomplete accounts of themselves learn through relationships with
 human practices and exist in the world in ways that exceed their source code In these ways algorithms and their relations to
 people cannot be understood by simply examining their code nor can ethics be encoded into algorithms Instead Amoore
 locates the ethical responsibility of algorithms in the conditions of partiality and opacity that haunt both human and
 algorithmic decisions To this end she proposes what she calls cloud ethics an approach to holding algorithms accountable by
 engaging with the social and technical conditions under which they emerge and operate **Osiris, Volume 38** James
 Evans, Adrian Johns, 2023-07-18 *Perceptively* explores the shifting intersections between algorithmic systems and human
 practices in the modern era How have algorithmic systems and human practices developed in tandem since 1800 This volume
 of *Osiris* deftly addresses the question dispelling along the way the traditional notion of algorithmic code and human craft as
 natural opposites Instead algorithms and humans have always acted in concert depending on each other to advance new
 knowledge and produce social consequences By shining light on alternative computational imaginaries *Beyond Craft and
 Code* opens fresh space in which to understand algorithmic diversity its governance and even its conservation The volume
 contains essays by experts in fields extending from early modern arithmetic to contemporary robotics Traversing a range of
 cases and arguments that connect politics historical epistemology aesthetics and artificial intelligence the contributors
 collectively propose a novel vocabulary of concepts with which to think about how the history of science can contribute to
 understanding today's world Ultimately *Beyond Craft and Code* reconfigures the historiography of science and technology to
 suggest a new way to approach the questions posed by an algorithmic culture not only improving our understanding of
 algorithmic pasts and futures but also unlocking our ability to better govern our present **Cultures and Societies in a

Digital Divisions Matthew H. Rafalow, 2020-08-12 In the digital age schools are a central part of a nationwide effort to make access to technology more equitable so that all young people regardless of identity or background have the opportunity to engage with the technologies that are essential to modern life Most students however come to school with digital knowledge they've already acquired from the range of activities they participate in with peers online Yet teachers as Matthew H Rafalow reveals in Digital Divisions interpret these technological skills very differently based on the race and class of their student body While teachers praise affluent White students for being innovative when they bring preexisting and sometimes disruptive tech skills into their classrooms less affluent students of color do not receive such recognition for the same behavior Digital skills exhibited by middle class Asian American students render them hackers while the creative digital skills of working class Latinx students are either ignored or earn them labels troublemakers Rafalow finds in his study of three California middle schools that students of all backgrounds use digital technology with sophistication and creativity but only the teachers in the school serving predominantly White affluent students help translate the digital skills students develop through their digital play into educational capital Digital Divisions provides an in depth look at how teachers operate as gatekeepers for students potential reacting differently according to the race and class of their student body As a result Rafalow shows us that the digital divide is much more than a matter of access it's about how schools perceive the value of digital technology and then use them day to day

Human Factors Models for Aviation Accident Analysis and Prevention Thomas G.C. Griffin,Mark S. Young,Neville A. Stanton,2017-03-02 The investigation and modelling of aviation accident causation is dominated by linear models Aviation is however a complex system and as such suffers from being artificially manipulated into non complex models and methods This book addresses this issue by developing a new approach to investigating aviation accident causation through information networks These networks centralise communication and the flow of information as key indicators of a system s health and risk This holistic approach focuses on the system environment the activity that takes place within it the strategies used to conduct this activity the way in which the constituent parts of the system both human and non human interact and the behaviour required Each stage of this book identifies and expands upon the potential of the information network approach maintaining firm focus on the overall health of a system The book s new model offers many potential developments and some key areas are studied in this research Through the centralisation of barriers and information nodes the method can be applied to almost any situation The application of Bayesian mathematics to historical data populations provides scope for studying error migration and barrier manipulation The book also provides application of these predictions to a flight simulator study for the purposes of validation Beyond this it also discusses the applicability of the approach to industry Through working with a legacy airline the methods discussed are used as the basis for a new and prospective safety management system

Intelligence and Security Informatics Hsinchun Chen, Reagan Moore, Daniel D. Zeng, John Leavitt, 2004-08-24 The past two years have seen significant interest and progress made in national and homeland security research in the areas of information technologies organizational studies and security related public policy Like medical and biological research which is facing significant information overload and yet also tremendous opportunities for new innovation the communities of law enforcement criminal analysis and intelligence are facing the same challenge As medical informatics and bioinformatics have become major fields of study the science of intelligence and

security informatics is now emerging and attracting interest from academic researchers in related fields as well as practitioners from both government agencies and industry. Broadly defined, intelligence and security informatics is the study of the development and use of advanced information technologies and systems for national and homeland security related applications through an integrated technological, organizational, and policy based approach. The First Symposium on Intelligence and Security Informatics (ISI2003) was held in June 2003 in Tucson, Arizona. It provided a stimulating intellectual forum of discussions among previously disparate communities: academic researchers in information technologies, computer science, public policy, and social studies; local, state, and federal law enforcement; and intelligence experts and information technology industry consultants and practitioners. Building on the momentum of ISI2003, we held the Second Symposium on

Intelligence and Security Informatics (ISI2004) in June 2004 in Tucson, Arizona. Communicating Biological Sciences Richard Elliott, 2016-05-23. Recent scandals in the biosciences have highlighted the perils of communicating science, leading many observers to ask questions about the pressures on scientists and the media to hype up claims of scientific breakthroughs. Journalists, science writers, and scientists themselves have to report complex and rapidly developing scientific issues to society yet work within conceptual and temporal constraints that shape their communication. To date, there has been little reflection on the ethical implications of science writing and science communication in an era of rapid change. Communicating Biological Sciences discusses the ethics of science communication in light of recent developments in biotechnology and biomedicine. It focuses on the role of metaphors in the creation of visions and the framing of scientific advances as well as their impact on patterns of public acceptance and rejection, trust, and scepticism. Its rigorous investigation will appeal not only to science writers and scientists but also to scholars of sociology of science and technology studies, media, and journalism.
