

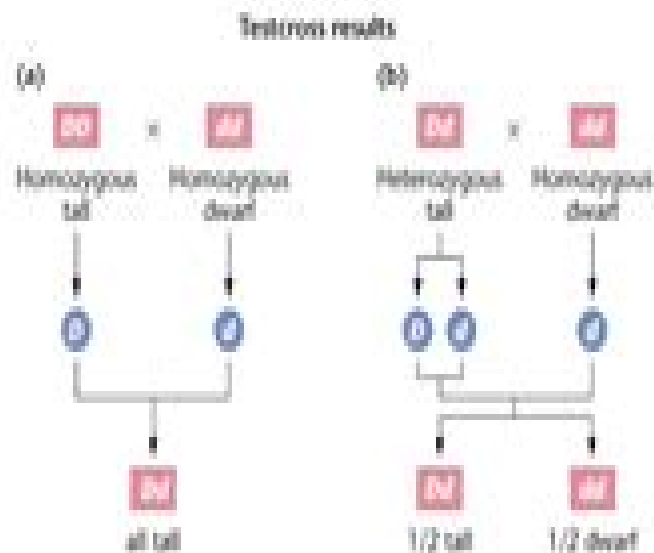

Figure 3-4

Testcrosses of a single character. In (a), the tall parent is homozygous, but in (b), the tall parent is heterozygous. The genotype of each tall  $P_1$  plant can be determined by examining the offspring when each is crossed with the homozygous recessive dwarf plant.

Therefore, a 1:1 tall/dwarf ratio demonstrates the heterozygous nature of the tall plant of unknown genotype. The results of the testcross reinforced Mendel's conclusion that separate unit factors control traits.
