

FOSSIL FUEL USE

Fossil Fuel Use Lab

Background information:

Fossil fuels, such as petroleum, coal, and natural gas, are formed from the remains of ancient plants and animals that lived millions of years ago. They are non-renewable resources, meaning they cannot be replaced once they are used. Fossil fuels are the primary source of energy for most of the world's energy needs. They are used to generate electricity, to power vehicles, and to heat homes and businesses. The combustion of fossil fuels releases carbon dioxide, a greenhouse gas that contributes to climate change. Therefore, it is important to understand how fossil fuels are used and to find ways to reduce their use.
