Verry, Kenneth Brooks, 2011-02-22 The Marcell Experimental Forest MEF in Minnesota serves as a living laboratory and provides scientists with a fundamental understanding of peatland hydrology acid rain impacts nutrient and carbon cycling trace gas emissions and controls on mercury transport in boreal watersheds Its important role in scientific research continues to grow as t

**Forest Hydrology** Devendra Amatya, Thomas Williams, Leon Bren, Carmen de Jong, 2016-09-14 Forests cover approximately 26% of the world s land surface area and represent a distinct biotic community They interact with water and soil in a variety of ways providing canopy surfaces which trap precipitation and allow evaporation back into the atmosphere thus regulating how much water reaches the forest floor as through fall as well as pull water from the soil for transpiration The discipline forest hydrology has been developed throughout the 20th century During that time human intervention in natural landscapes has increased and land use and management practices have intensified The book will be useful for graduate students professionals land managers practitioners and researchers with a good understanding of the basic principles of hydrology and hydrologic processes

*Coal and Coalbed Gas* Romeo M. Flores,Tim A. Moore,2024-01-24 *Coal and Coalbed Gas Future Directions and Opportunities* Second Edition introduces the latest in coal geology research and the engineering of gas extraction Importantly the second edition examines how over the last 10 years research has both changed focus and where it is conducted This shift essentially depicts a tale of two worlds one half Western Europe North America moving away from coal and coalbed gas research and production towards cleaner energy resources and the other half Asia Pacific region Eastern Europe South America increasing both research and usage of coal These changes are marked by a precipitous fall in coalbed gas production in North America however at the same time there has been a significant rise in coal and coalbed gas production in Australia China and India The driver for higher production and its associated research is a quest for affordable energy and economic security that a large resource base brings to any country like Australia s first large scale coalbed gas to liquid natural gas projects supplying the demand for cleaner burning LNG to the Asian Pacific region Since the last edition of this book global climate change policies have more forcibly emphasized the impact of methane from coal mines and placed these emissions equal to or even more harmful than CO<sub>2</sub> emissions from fossil fuels in general Governmental policies have prioritized capture use and storage of CO<sub>2</sub> burning coal in new highly efficient low emission power plants and gas pre drainage of coal mines The Organization for Economic Cooperation and Development OECD countries and China are also introducing new research into alternative non fuel uses for coal such as carbon fibers nanocarbons graphene soil amendments and as an unconventional ore for critical elements New to this edition Each chapter is substantially changed from the 1st edition including expanded and new literature citations and reviews important new data and information new features and materials as well as re organized and re designed themes Importantly three new chapters cover global coal endowment and gas potential groundwater systems related to coalbed gas production and biogenic gas generation as well as the changing landscape of coal and coalbed gas influenced by global climate change and net zero carbon greenhouse gas emissions

FOREWORD When I reviewed the first edition of this book my initial thought was Do we need another book on coal geology and then I read it and realised Yes we need this book and my students downloaded copies as soon as it was available So now we come to 2023 and a lot has happened in the past decade For a different reason we might ask if we still need this book or even coal geoscientists and engineers as the world aims for rapid decarbonisation of the energy sector and a reduction of coal as a feedstock for industrial resources like steel manufacture

**USDA Forest Service Experimental Forests and Ranges** Deborah C. Hayes, Susan L. Stout, Ralph H. Crawford, Anne P. Hoover, 2014-07-22 USDA Forest Service Experimental Forests and Ranges EFRs are scientific treasures providing secure protected research sites where complex and diverse ecological processes are studied over the long term This book offers several examples of the dynamic interactions among questions of public concern or policy EFR research and natural resource management practices and policies Often trends observed or expected in the early years of a research program are contradicted or confounded as the research record extends over decades The EFRs are among the few areas in the US where such long term research has been carried out by teams of scientists Changes in society's needs and values can also redirect research programs Each chapter of this book reflects the interplay between the ecological results that emerge from a long term research project and the social forces that influence questions asked and resources invested in ecological research While these stories include summaries and syntheses of traditional research results they offer a distinctly new perspective a larger and more complete picture than that provided by a more typical 5 year study They also provide examples of long term research on EFRs that have provided answers for questions not even imagined at the time the study was installed

Sullivan,2015-10-05 Ecosystem effects from air pollution in the Adirondacks Catskills and elsewhere in New York have been substantial Efforts to characterize and quantify these impacts and to examine more recent recovery have focused largely on surface waters soils and forests Lakes streams and soils have acidified Estuaries have become more eutrophic Nutrient cycles have been disrupted Mercury has bioaccumulated to toxic levels Plant species composition has changed Some surface waters show signs of partial chemical recovery in response to emissions control programs but available data suggest that soil chemistry may continue to deteriorate under expected future emissions and deposition Resource managers policymakers and scientists now need to know the extent to which current and projected future emissions reductions will lead to ecosystem recovery In this book Timothy J Sullivan provides a comprehensive synthesis of past current and potential future conditions regarding atmospheric sulfur nitrogen oxides ammonium and mercury deposition surface water chemistry soil chemistry forests and aquatic biota in New York providing much needed information to help set emissions reduction goals evaluate incremental improvements conduct cost benefit analyses and prioritize research needs He draws upon a wealth of research conducted over the past thirty years that has categorized quantified and advanced understanding of ecosystem processes related to atmospheric deposition of strong acids nutrients and mercury and associated ecosystem effects An important component of this volume is the new interest in the management and mitigation of ecosystem damage from air pollution stress which builds on the critical loads approach pioneered in Europe and now gaining interest in the United States This book will inform scientists resource managers and policy analysts

regarding the state of scientific knowledge on these complex topics and their policy relevance and will help to guide public policy assessment work in New York the Northeast and nationally      **Peatlands International** ,2008      **Peatland and Water in the Northern Lake States** Don H.
