The plant factory is a facility that aids the steady production of high quality vegetables all year round by artificially controlling the cultivation environment e g light temperature humidity carbon dioxide concentration and culture solution allowing growers to plan production By controlling the internal environment plant factories can produce vegetables about two to four times faster than by typical outdoor cultivation In addition as multiple cultivation shelves a multi shelf system are used the mass production of vegetables in a small space is facilitated This research topic presents some new trends on intelligent measuring systems environment controlled and optimization flavonoids phenylpropanoids transcriptomes and bacteria

Biocontrol Systems and Plant Physiology in Modern Agriculture Romeo Rojas,Guillermo Cristian Guadalupe Martínez Ávila,Juan Antonio Vidales Contreras,Cristóbal Noé Aguilar,2022-09-22 Biocontrol Systems and Plant Physiology in Modern Agriculture Processes Strategies Innovations focuses on new production alternatives that do not include pesticides herbicides or chemicals for primary food production and instead rely on biologically controlled systems of production The book also relates a number of advances and innovations in the use of agricultural technologies that employ the study of the physiology of plants to know their resistance to different environments in modern agriculture The book presents research offering viable alternatives for the control of pests for safe food production that are environmentally friendly and that facilitate the reduction of production costs and improve the quality and yield of produce The volume addresses innovative biocontrol systems to reduce or eliminate the use of agrochemicals by controlling plant diseases by minimizing environmental damage through the use of antagonistic organisms It also presents new strategies of cultivation that maximize production by optimizing light temperature humidity nutrients and humidity in a controlled environment The diverse topics in the volume include botanical compounds as adjuvants as an alternative to reduce the pesticide use on site production of bio control agents plant factory systems that offer controlled safe environments for plant cultivation promising bio nematicides for sustainable agriculture wastewater reclamation for agricultural purposes the recovery of phytochemicals from plants using LED lights on plants and microgreens production and much more Covering the new trends in biological control plant factories and plant metabolism for application in modern agriculture this volume provides important research and knowledge that facilitates environmentally friendly plant systems advances the reduction of production costs and improves the quality and yield of produce

LED Lighting for Urban Agriculture Toyoki Kozai,Kazuhiro Fujiwara,Erik S. Runkle,2016-11-08 This book focuses on light emitting diode LED lighting mainly for the commercial production of horticultural crops in plant factories and greenhouses with controlled environments giving special attention to 1 plant growth and development as affected by the light environment and 2 business and technological opportunities and challenges with regard to LEDs The

book contains more than 30 chapters grouped into seven parts 1 overview of controlled environment agriculture and its significance 2 the effects of ambient light on plant growth and development 3 optical and physiological characteristics of plant leaves and canopies 4 greenhouse crop production with supplemental LED lighting 5 effects of light quality on plant physiology and morphology 6 current status of commercial plant factories under LED lighting and 7 basics of LEDs and LED lighting for plant cultivation LED lighting for urban agriculture in the forthcoming decades will not be just an advanced form of current urban agriculture It will be largely based on two fields One is a new paradigm and rapidly advancing concepts global technologies for LEDs information and communication technology renewable energy and related expertise and their methodologies the other is basic science and technology that should not change for the next several decades Consideration should be given now to future urban agriculture based on those two fields The tremendous potentials of LED lighting for urban agriculture are stimulating many people in various fields including researchers businesspeople policy makers educators students community developers architects designers and entrepreneurs Readers of this book will understand the principle concept design operation social roles pros and cons costs and benefits of LED lighting for urban agriculture and its possibilities and challenges for solving local as well as global agricultural environmental and social issues *Secondary Metabolites in Plant Stress Adaptation* Nabil Semmar, 2024-06-20 This book covers correlation and combined disciplinary aspects implying the use of secondary metabolites SMs of different plant species for control and monitoring of environment states Phytochemical management of ecological systems represents an integrative field aiming for determination evaluation of environment conditions from qualitative and quantitative analysis of plant metabolites Plants respond to environmental conditions through productions of secondary metabolites SMs represent highly variable and sensitive phytocompounds because of their small produced amounts high structural variability and diversified activities These characteristics make variations of SMs in plants to be highly informative on environmental conditions physiological states and biological interactions Qualitative and quantitative variations of SMs in plants are subject to correlation analyses to highlight links between biotic abiotic conditions and plant chemical patterns
