**Beyond Collapse** Ronald K. Faulseit, 2016 This book interprets how ancient civilizations responded to various stresses including environmental change warfare and the fragmentation of political institutions It focuses on what happened during and after the decline of once powerful regimes and posits that they experienced social resilience and transformation instead of collapse

Beyond Collapse Ronald K. Faulseit, 2015-12-07 The Maya The Romans The great dynasties of ancient China It is generally believed that these once mighty empires eventually crumbled and disappeared A recent trend in archaeology however focusing on what happened during and after the decline of once powerful societies has found social resilience and transformation instead of collapse In *Beyond Collapse Archaeological Perspectives on Resilience Revitalization and Transformation in Complex Societies* editor Ronald K Faulseit gathers scholars with diverse theoretical perspectives to present innovative approaches to understanding the decline and reorganization of complex societies Essays in the book are arranged into five sections The first section addresses previous research on the subject of collapse and reorganization as well as recent and historic theoretical trends In the second section contributors look at collapse and resilience through the concepts of collective action eventful archaeology and resilience theory The third section introduces critical analyses of the effectiveness of resilience theory as a heuristic tool for modeling the phenomena of collapse and resilience In the fourth section contributors examine long term adaptive strategies employed by prehistoric societies to cope with stresses Essays in the fifth section make connections to contemporary research on post decline societies in a variety of time periods and geographic locations Contributors consider collapse and reorganization not as unrelated phenomena but as integral components in the evolution of complex societies Using archaeological data to interpret how ancient civilizations responded to various stresses including environmental change warfare and the fragmentation of political institutions contributors discuss not only what leads societies to collapse but also why some societies are resilient and others are not as well as how societies reorganize after collapse The implications of the fate of these societies for modern nations cannot be underestimated Putting in context issues we face today such as climate change lack of social diversity and the failure of modern states *Beyond Collapse* is an essential volume for readers interested in human environment interaction and in the collapse and subsequent reorganization of human societies

**Intercultural Urbanism** Dean Saitta, 2020-07-23 Cities today are paradoxical They are engines of innovation and opportunity but they are also plagued by significant income inequality and segregation by ethnicity race and class These inequalities and segregations are often reinforced by the urban built environment the planning of space and the design of architecture This condition threatens attainment of wider social and economic prosperity In this innovative new study Dean Saitta explores questions of urban sustainability by taking an intercultural trans historical approach to city planning Saitta uses a largely untapped body of knowledge the archaeology of cities in the ancient world to generate ideas about how public space housing and civic architecture might be better designed

to promote inclusion and community while also making our cities more environmentally sustainable By integrating this knowledge with knowledge generated by evolutionary studies and urban ethnography including a detailed look at Denver Colorado one of America s most desirable and fastest growing destination cities but one that is also experiencing significant spatial segregation and gentrification Saitta s book offers an invaluable new perspective for urban studies scholars and urban planning professionals

**Native Nations** Kathleen DuVal, 2025-05-27 PULITZER PRIZE WINNER A magisterial overview of a thousand years of Native American history The New York Review of Books from the rise of ancient cities more than a thousand years ago to fights for sovereignty that continue today WINNER OF THE BANCROFT PRIZE THE CUNDILL HISTORY PRIZE AND THE MARK LYNTON HISTORY PRIZE Long before the colonization of North America Indigenous Americans built diverse civilizations and adapted to a changing world in ways that reverberated globally And as award winning historian Kathleen DuVal vividly recounts when Europeans did arrive no civilization came to a halt because of a few wandering explorers even when the strangers came well armed A millennium ago North American cities rivaled urban centers around the world in size Then following a period of climate change and instability numerous smaller nations emerged moving away from rather than toward urbanization From this urban past egalitarian government structures diplomacy and complex economies spread across North America So when Europeans showed up in the sixteenth century they encountered societies they did not understand those having developed differently from their own and whose power they often underestimated For centuries afterward Indigenous people maintained an upper hand and used Europeans in pursuit of their own interests In *Native Nations* we see how Mohawks closely controlled trade with the Dutch and influenced global markets and how Quapaws manipulated French colonists Power dynamics shifted after the American Revolution but Indigenous people continued to command much of the continent s land and resources Shawnee brothers Tecumseh and Tenskwatawa forged new alliances and encouraged a controversial new definition of Native identity to attempt to wall off U S ambitions The Cherokees created institutions to

assert their sovereignty on the global stage and the Kiowas used their power in the west to regulate the passage of white settlers across their territory In this important addition to the growing tradition of North American history centered on Indigenous nations Kathleen DuVal shows how the definitions of power and means of exerting it shifted over time but the sovereignty and influence of Native peoples remained a constant and will continue far into the future An essential American history The Wall Street Journal *Resilience* Sandrine Robert,2021-12-17 The articulation between persistence and change is relevant to a great number of different disciplines It is particularly central to the study of urban and rural forms in many different fields of research in geography archaeology architecture and history Resilience puts forward the idea that we can no longer be truly satisfied with the common approaches used to study the dynamics of landscapes such as the palimpsest approach the regressive method and the semiological analysis amongst others because they are based on the separation between the past and the present which itself stems from the differentiation between nature and society This book combines spatio temporalities as described in archeogeography with concepts that have been developed in the field of ecological resilience such as panarchy and the adaptive cycle Thus revived the morphological analysis in this work considers landscapes as complex resilient adaptive systems The permanence observed in landscapes is no longer presented as the endurance of inherited forms but as the result of a dynamic that is fed by this constant dialogue between persistence and change Thus resilience is here decisively on the side of dynamics rather than that of resistance First Cities Dean Saitta,2024-04-03 This Element describes and synthesizes archaeological knowledge of humankind's first cities for the purpose of strengthening a comparative understanding of urbanism across space and time Case studies are drawn from ancient Mesopotamia Europe Asia Africa and the Americas They cover over 9000 years of city building Cases exemplify the deep history of urbanism in the classic heartlands of civilization as well as lesser known urban phenomena in other areas and time periods The Element discusses the relevance of this knowledge to a number of contemporary urban challenges around food security service provision housing ethnic co existence governance and sustainability This study seeks to enrich scholarly debates about the urban condition and inspire new ideas for urban policy planning and placemaking in the twenty first century **The Resilience of the Roman Empire** Dimitri Van Limbergen,Sadi Maréchal,Wim De Clercq,2020 The Resilience of the Roman Empire discusses the relationship between population and regional development in the Roman world from the perspective of archaeology By adapting a comparative approach the focus of the volume lies on exploring the various ways in which regional communities actively responded to population growth or decline in order to keep going on the land available to them The starting point of the theoretical framework for the case studies is the agricultural intensification models developed by Thomas Malthus and Ester Boserup In order to advance the debate on the validity of these models for identifying the societal and economic pathways of the Roman world the contributors incorporate the concepts of resilience and diversity into their approach and shift attention from the longue dur e to how people managed to sustain themselves over

shorter periods of time The aim of the volume is not to discard the theories of Malthus and Boserup but rather to deconstruct overly strict Malthusian or Boserupian scenarios and as such introduce novel and more layered ways of thinking by exploring resilience and variability in human responses to population growth decline in the Roman world After Collapse Glenn M. Schwartz, John J. Nichols, 2010-08-15 From the Euphrates Valley to the southern Peruvian Andes early complex societies have risen and fallen but in some cases they have also been reborn Prior archaeological investigation of these societies has focused primarily on emergence and collapse This is the first book length work to examine the question of how and why early complex urban societies have reappeared after periods of decentralization and collapse Ranging widely across the Near East the Aegean East Asia Mesoamerica and the Andes these cross cultural studies expand our understanding of social evolution by examining how societies were transformed during the period of radical change now termed collapse They seek to discover how societal complexity reemerged how second generation states formed and how these re emergent states resembled or differed from the complex societies that preceded them The contributors draw on material culture as well as textual and ethnohistoric data to consider such factors as preexistent institutions structures and ideologies that are influential in regeneration economic and political resilience the role of social mobility marginal groups and peripheries and ethnic change In addition to presenting a number of theoretical viewpoints the contributors also propose reasons why regeneration sometimes does not occur after collapse A concluding contribution by Norman Yoffee provides a critical exegesis of collapse and highlights important patterns found in the case histories related to peripheral regions and secondary elites and to the ideology of statecraft After Collapse blazes new research trails in both archaeology and the study of social change demonstrating that the archaeological record often offers more clues to the dark ages that precede regeneration than do text based studies It opens up a new window on the past by shifting the focus away from the rise and fall of ancient civilizations to their often more telling fall and rise
