Multi-Winner Voting with Approval Preferences Martin Lackner, Piotr Skowron, 2022-11-17 From fundamental concepts and results to recent advances in computational social choice this open access book provides a thorough and in depth look at multi winner voting based on approval preferences. The main focus is on axiomatic analysis, algorithmic results and several applications that are relevant in artificial intelligence, computer science and elections of any kind. What is the best way to select a set of candidates for a shortlist for an executive committee or for product recommendations? Multi winner voting is the process of selecting a fixed size set of candidates based on the preferences expressed by the voters. A wide variety of decision processes in settings ranging from politics, parliamentary elections to the design of modern computer applications, collaborative filtering, dynamic Q&A platforms, diversity in search results etc. share the problem of identifying a representative subset of alternatives. The study of multi winner voting provides the principled analysis of this task. Approval based committee voting rules in short ABC rules are multi winner voting rules particularly suitable for practical use. Their usability is founded on the straightforward form in which the voters can express preferences: voters simply have to differentiate between approved and disapproved candidates. Proposals for ABC rules are numerous, some dating back to the late 19th century while others have been introduced only very recently. This book explains and discusses these rules, highlighting their individual strengths and weaknesses. With the help of this book the reader will be able to choose a suitable ABC voting rule in a principled fashion, participate in and be up to date with the ongoing research on this topic.
