Late Holocene Research on Foragers and Farmers in the Desert West Barbara J. Roth, Maxine McBrinn, 2016
Provides new perspectives on prehistoric foragers and farmers in the Southwest and Great Basin by highlighting the similarities and differences observed in these groups across time

Broken Bones, Broken Bodies Debra L. Martin, Caryn E. Tegtmeier, 2017-07-14 Injury recidivism is a continuing health problem in the modern clinical setting and has been part of medical literature for some time. However, it has been largely absent from forensic and bioarchaeological scholarship despite the fact that practitioners work closely with skeletal remains and in many cases skeletal trauma. The contributors to this edited collection seek to close this gap by exploring the role that injury recidivism and accumulative trauma plays in bioarchaeological and forensic contexts. Case examples from prehistoric, historic, and modern settings are included to highlight the avenues through which injury recidivism can be studied and analyzed in skeletal remains and to illustrate the limitations of studying injury recidivism in deceased populations

Archaeology on the Threshold Joseph D. Wardle, Robert K. Hitchcock, Matthew Schmader, Pei-Lin Yu, 2022-12-30 Incorporating data from across six continents and tracing the human experience from the Late Pleistocene to the present, this volume examines transitional periods of cultural and environmental change through the lenses of archaeology and ethnography

From Foragers to Farmers Ehud Weiss, 2009-08-01 This volume celebrates the career of archaeobotanist Professor Gordon C. Hillman. Twenty-eight papers cover a wide range of topics reflecting the great influence that Hillman has had in the field of archaeobotany. Many of his favourite research topics are covered, the body of the text being split into four sections: Personal reflections on Professor Hillman's career; archaeobotanical theory and method; ethnoarchaeological and cultural studies; and ancient plant use from sites and regions around the world. The collection demonstrates as Gordon Hillman believes that the study of archaeobotany is not only valuable but vital for any study of humanity

Mobility and pastoralism in the Egyptian Western Desert.

Steinplätze in the Holocene regional settlement patterns Marina Gallinaro, 2018-03-15 This volume presents the results of a long study begun in 2004 within the framework of the Archaeological Mission in the Farafra Oasis of Egypt, directed by Barbara Barich and Giulio Lucarini of the Sapienza University of Rome, now under the auspices of ISMEO. The book focuses on the features known as Steinplatz type hearths and their role in the settlement patterns of the human groups living in the Egyptian Western Desert during the middle and late Holocene. Steinplätze are concentrations of burned and fire-cracked stones that vary in shape and size and have often been slightly elevated above the present ground level by post-depositional erosion processes. Occurring both as isolated features and in clusters, they are often the only visible structures or even traces of ancient settlements. The study of these features is closely interconnected with the mobility strategies of the communities that inhabited this desert region during a period of higher average rainfall than at present but also characterised by significant climate fluctuations with humid periods interrupted by dry spells and eventually ending in an overall trend

towards greater desertification The use of the Steinplatz type hearths was most widespread in the second half of the sixth millennium BC when mobile occupation strategies replaced a more sedentary model An analysis of the Farafra Oasis Steinplatz is coupled with a general reassessment of the subsistence and mobility models hitherto proposed for the Eastern Sahara suggesting an integrated occupation system for Farafra itself The economy of the forager herders of the middle Holocene during the climate optimum 6900-5550 cal BC seems to have relied significantly on herding small livestock but also on hunting and likely concentrated on the gathering of wild cereals such as sorghum During the climate optimum forms of seasonal stabilisation of the settlement strategy seem to emerge with the alternating occupation of two different winter and summer villages consisting of clusters of stone slab huts short term task specific camps using Steinplatz logistically completed the system After this phase only short term camps with Steinplatz were occupied These were probably directly dependent on the wettest areas at the centre of the oases and made use of a tethered exploitation strategy with brief movements from the central oasis daisy chain movements The use strategies of the Steinplatz type hearths within the mobile settlement system are outlined adopting a clear and immediately assessable model Yet although they are among the most distinctive of the Sahara's archaeological features Steinplatz have received little systematic attention in recent decades Marina Gallinaro's work thus marks a new phase in their study one that draws them back into discussions of how early livestock keeping populations in Northeast Africa used the resources and landscapes to the west of the Nile along a trajectory of increasing aridification that eventually culminated in the desert we see today Lucidly written Gallinaro's volume will I believe help inspire individuals to take up the research agenda she sets out At a time when so much of the Sahara is off limits to archaeological fieldwork it is deeply gratifying to see here yet more evidence of the thoroughness and high quality that have characterized the work of Italian archaeologists in this region of Africa over many decades The continuing publication of their research Marina Gallinaro's included in the Arid Zone Archaeology monograph series will surely help sustain widespread interest in Saharan archaeology until it becomes possible to excavate and survey again free of current geopolitical restrictions May that day come soon Prof Peter Mitchell University of Oxford UK

Climate Changes in the Holocene: Eustathios Chiotis, 2018-11-15 This book highlights climate as a complex physical chemical biological and geological system in perpetual change under astronomical predominantly solar control It has been shaped to some degree through the past glaciation cycles repeated in the last three million years The Holocene the current interglacial epoch which started ca 11 700 years ago marks the transition from the Stone Age to the unprecedented cultural evolution of our civilization Significant climate changes have been recorded in natural archives during the Holocene including the rapid waning of ice sheets millennial shifting of the monsoonal fringe in the northern hemisphere and abrupt centennial events A typical case of severe environmental change is the greening of Sahara in the Early Holocene and the gradual desertification again since the fifth millennium before present Climate Changes in the Holocene Impact Adaptation and Resilience

investigates the impact of natural climate changes on humans and civilization through case studies from various places periods and climates Earth and human society are approached as a complex system thereby emphasizing the necessity to improve adaptive capacity in view of the anthropogenic global warming and ecosystem degradation Features Written by distinguished experts the book presents the fundamentals of the climate system the unparalleled progress achieved in the last decade in the fields of intensified research for improved understanding of the carbon cycle climate components and their interaction Presents the application of paleoclimatology and modeling in climate reconstruction Examines the new era of satellite based climate monitoring and the prospects of reduced carbon dioxide emissions The Desert Fayum

Reinvestigated Simon J. Holdaway, Willeke Wendrich, 2017-12-31 The Neolithic is thought to have arrived in Egypt via diffusion from an origin in southwest Asia relatively late compared to neighboring locations The authors suggest an alternative approach to understanding the development of food production in Egypt based on the results of new fieldwork in the Fayum They provide the results of a detailed study of the Fayum archaeological landscape interpretable at different temporal and spatial scales using an expanded version of low level food production to organize observations concerning paleoenvironment socioeconomy settlement and mobility While domestic plants and animals were indeed introduced from elsewhere when a number of aspects of the archaeological record are compared a settlement system is suggested that has no obvious analogues with the Neolithic in southwest Asia The results obtained from the Fayum are used to assess other contemporary sites in Egypt The Oxford Handbook of Egyptology Ian Shaw, Elizabeth Bloxam, 2020 The Oxford Handbook of Egyptology offers a comprehensive survey of the entire study of ancient Egypt from prehistory through to the end of the Roman period Transcending conventional boundaries between archaeological and ancient textual analysis and bringing together 63 chapters that range widely across the various archaeological philological and cultural sub disciplines authored by recognized experts in their respective fields it highlights the extent to which the discipline has diversified and stresses the need for it to seek multidisciplinary methods and broader collaborations if it is to remain contemporary and relevant Authoritative yet accessible it is an invaluable resource for scholars students and general readers alike **Prehistory of**

North America Mark Sutton, 2015-12-22 A Prehistory of North America covers the ever evolving understanding of the prehistory of North America from its initial colonization through the development of complex societies and up to contact with Europeans This book is the most up to date treatment of the prehistory of North America In addition it is organized by culture area in order to serve as a companion volume to An Introduction to Native North America It also includes an extensive bibliography to facilitate research by both students and professionals *Sandals of the Basketmaker and Pueblo Peoples* Lynn Shuler Teague, Dorothy Koster Washburn, 2013-06-01 The decorated sandals worn by prehistoric southwesterners with their complex fiber structures and designs have been dissected described and interpreted for a century Nevertheless these artifacts remain mysterious in many respects Teague and Washburn examine these sandals as sources of

information on the history of the people known as the Basketmakers The unique sandals of early southwestern farmers appear in Basketmaker II and reach their greatest elaboration with the complex fabric structures and colorbanded designs of Basketmaker III The appearance of this footwear coincides with the transition to fully sedentary maize agriculture The authors address the origins of these sandals and what they may reveal about population movements onto and around the Colorado Plateau and about the cosmology of early farmers

Archaeology of African Plant Use Chris J Stevens, Sam Nixon, Mary Anne Murray, Dorian Q Fuller, 2016-07 The first major synthesis of African archaeobotany in decades this book significantly advances our knowledge of relationship between agriculture and social complexity

The Agricultural Revolution in Prehistory Graeme Barker, 2009 Addressing one of the most debated revolutions in the history of our species the change from hunting and gathering to farming this title takes a global view and integrates an array of information from archaeology and many other disciplines including anthropology botany climatology genetics linguistics and zoology

Archaeological Perspectives on Warfare on the Great Plains Andrew Clark, Douglas Bamforth, 2018-05-15 The Great Plains has been central to academic and popular visions of Native American warfare largely because the region's well documented violence was so central to the expansion of Euroamerican settlement However social violence has deep roots on the Plains beyond this post Contact perception and these roots have not been systematically examined through archaeology before War was part and perhaps an important part of the process of ethnogenesis that helped to define tribal societies in the region and it affected many other aspects of human lives there In Archaeological Perspectives on Warfare on the Great Plains

anthropologists who study sites across the Plains critically examine regional themes of warfare from pre Contact and post Contact periods and assess how war shaped human societies of the region Contributors to this volume offer a bird's eye view of warfare on the Great Plains consider artistic evidence of the role of war in the lives of indigenous hunter gatherers on the Plains prior to and during the period of Euroamerican expansion provide archaeological discussions of fortification design and its implications and offer archaeological and other information on the larger implications of war in human history

Bringing together research from across the region this volume provides unprecedented evidence of the effects of war on tribal societies Archaeological Perspectives on Warfare on the Great Plains is a valuable primer for regional warfare studies and the archaeology of the Great Plains as a whole Contributors Peter Bleed Richard R Drass David H Dye John Greer Mavis Greer Eric Hollinger Ashley Kendell James D Keyser Albert M LeBeau III Mark D Mitchell Stephen M Perkins Bryon

Brett Hill, 2006-02 Amid mounting concern over modern environmental degradation archaeologists around the world are demonstrating the long history of such processes and the way they have shaped current

landscapes A growing body of evidence shows how humans have modified their environment for millennia and contemporary problems cannot be understood without an adequate sense of this ecological past and the role of humans in it The Wadi al Hasa a large canyon draining the Transjordan Plateau into the Dead Sea has been the location of repeated cycles of settlement and land use for thousands of years This book focuses on changing land use patterns and their relationship to socio political organization Using a combination of archaeological and environmental data Brett Hill examines the human ecology of agriculture and pastoralism from the beginnings of domestication through the rise and collapse of complex societies Models of land use often consider political complexity as an important factor affecting mismanagement Together with GIS erosion modeling and settlement pattern analysis Hill evaluates the archaeological historical and environmental record spanning the Holocene to show how land use was affected by the rise of centralized authority Yet populations in the Hasa maintained the ability to resist authority and return to a nomadic life when it became advantageous This process emphasizes the power of local groups to pursue alternative strategies when their interests diverged from those of elites creating a dynamic that reshapes the landscape each generation Hill s analysis contributes significantly to our understanding of the history of human ecology in the southern Levant wherein current debates are complicated by research at different scales and by a lack of consensus on the importance of localized phenomena It not only complements existing research but also seeks to refine models of processes in human ecology to demonstrate the effect of political organization on land mismanagement

Foragers, Farmers, and Fossil Fuels (eGalley) Ian Morris, **On the Early Holocene** Nicolas Marceau, Gordon M. Myers, 2005 We consider a world in which the mode of food production foraging or agriculture is endogenous and in which technology grows exogenously Within a model of coalition formation we allow individuals to rationally form cooperative communities bands of foragers or farmers At the lowest levels of technology equilibrium entails the grand coalition of foragers a cooperative structure which avoids over exploitation of the environment But at a critical state of technology the cooperative structure breaks down through an individually rational splintering of the band At this stage there can be an increase in work and through the over exploitation of the environment a food crisis In the end technological growth may lead to a one way transition from foraging to agriculture
