web the change in direction of a beam of light as it travels from one material to another is called refraction the normal is a construction line drawn at right angles to the surface of the glass

web we see the light reflected off a mirror coming from a direction determined by the law of reflection the changing of a light ray's direction loosely called bending when it passes through variations in matter is called refraction

web 3 2 2 references what is reflection when a ray of light comes back into the same medium after striking the surface of another medium then the phenomenon is called reflection of light in other words reflection is the bouncing back of the light rays from a surface in the same medium what is refraction

web 692 reflection and refraction of light p25 9 a as measured from the diagram the incidence angle is  $60^\circ$  and the refraction angle is  $35^\circ$  from snell's law  $\sin \theta_1 / v_1 = \sin \theta_2 / v_2$  then  $\sin 35^\circ / 2 \times 10^8 \text{ m/s} = \sin 60^\circ / v$  and the speed of light in the block is  $2.0 \times 10^8 \text{ m/s}$  b the frequency of the light does not change upon refraction

**16 1 reflection physics openstax** - Feb 11 2022

web there are two laws that govern how light changes direction when it interacts with matter the law of reflection for situations in which light bounces off matter and the law of refraction for situations in which light passes through matter in this section we consider the geometric optics of reflection

web refraction is the bending of light it also happens with sound water and other waves as it passes from one transparent substance into another this bending by refraction makes it possible for us to have lenses magnifying glasses prisms and rainbows even our eyes depend upon this bending of light
