Goal Writing for the Speech-Language Pathologist and Special Educator Gozdziwski, 2018-01-12 Geared for undergraduate and graduate students, *Goal Writing for the Speech-Language Pathologist and Special Educator* details different types of goals, essential elements of goals, how to establish goals from information garnered from evaluations, and how to write continuing goals for the field of Speech-Language Pathology and Communication Sciences. It is written for students in a Clinical Methods/Clinical Practicum course who are about to begin their clinical experience in SLP. Real-world exercises are provided throughout in order to provide realistic examples of what students may encounter in speech and hearing clinics, hospitals, and schools. Goal writing is practiced by SLPs on a daily basis, and understanding how to turn diagnostic information into therapy is a difficult yet crucial task. This important subject is not covered in depth in other clinical methods titles, yet it is a skill all students and clinicians must master.

**Statistical Diagnostics of Electric Power Equipment** Vitalii Babak, Sergii Babak, Artur Zaporozhets, 2024-11-25 This book considers the issues of constructing mathematical probabilistic models of diagnostic signals, the development of statistical methods of their analysis in order to make diagnostic decisions, and finally, the technical implementation of the proposed diagnostic methods. Following the concept of primacy of the mathematical model of the diagnostic signal, the authors considered it expedient to consider first of all the questions connected with the theory of random processes possessing infinitely divisible distribution laws, linear

and linear periodic random processes Considerable attention is paid to the issues of simulation modeling of diagnostic signals and their statistical evaluation Modern element base and new information technologies allowed to develop build and practically test a number of experimental samples of information measuring systems of statistical diagnostics of electric power engineering objects Among these IMS the systems are realized by means of unmanned diagnostic complexes and also IMS of vibrodiagnostics of moving units of electric machines represents an important role A large amount of experimental research has shown the operability and efficiency of the built IMS samples Particular attention is paid to the selection of diagnostic spaces formation of training sets construction of solving rules for diagnosis and classification of EE defects The authors do not pretend to a comprehensive consideration of the issues of EE diagnostics using statistical methods and IMS realized on their basis At the same time the results of researches stated in this monograph were a natural continuation of the subject of application of statistical methods in the field of control monitoring and diagnostics for objects of electric power industry

Modern Mathematical Tools and Techniques in Capturing Complexity Leandro Pardo, Narayanaswamy Balakrishnan, Maria Angeles Gil, 2011-05-26 Real life problems are often quite complicated in form and nature and for centuries many different mathematical concepts ideas and tools have been developed to formulate these problems theoretically and then to solve them either exactly or approximately This book aims to gather a collection of papers dealing with several different problems arising from many disciplines and some modern mathematical approaches to handle them In this respect the book offers a wide overview on many of the current trends in Mathematics as valuable formal techniques in capturing and exploiting the complexity involved in real world situations Several researchers colleagues friends and students of Professor Mar a Luisa Men ndez have contributed to this volume to pay tribute to her and to recognize the diverse contributions she had made to the fields of Mathematics and Statistics and to the profession in general She had a sweet and strong personality and instilled great values and work ethics in her students through her dedication to teaching and research Even though the academic community lost her prematurely she would continue to provide inspiration to many students and researchers worldwide through her published work

**How to Enhance Learning Efficiency When Online Learning is Popular and Indispensable: Theory, Research and Practice** Rong Lian, Chang Liu ,Juzhe Xi, 2024-07-17 Online learning has become more and more common globally whether for comfort adapting to work hours or just having the freedom to study from anywhere And now under the coronavirus pandemic as people are having to stay at home it has become more important than ever Although the popularity of wireless network and portable smart device makes it possible for people to acquire and learn knowledge anytime and anywhere it does not necessarily mean an increased learning performance Relevant research in cognitive science has revealed possible limitations in online learning For example the knowledge acquired through online learning tends to be fragmented and lacks guidance for integrated thinking among different subjects which makes it difficult for learners to form a systematic knowledge structure Learners may experience cognitive overload metacognitive illusion and low learning efficiency in self regulated learning It follows that in the post COVID 19 era online learning puts forward new requirements and challenges to the contemporary students not only to their learning strategies but positive character traits in learning Most of the current learning theories were developed in the early 20th century and may not fit in well with the current situation then possibly leading to inefficient learning and increased learning burden Therefore it is necessary and important to reexplore the influencing factors and mechanisms that affect the learning efficiency of students at all levels nowadays based on which we could construct a theoretical model of efficient learning model
