Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research National Research Council,Division on Earth and Life Studies,Institute for Laboratory Animal Research,Committee on Guidelines for the Use of Animals in Neuroscience and Behavioral Research,2003-08-22 Expanding on the National Research Council's Guide for the Care and Use of Laboratory Animals this book deals specifically with mammals in neuroscience and behavioral research laboratories It offers flexible guidelines for the care of these animals and guidance on adapting these guidelines to various situations without hindering the research process *Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research* offers a more in depth treatment of concerns specific to these disciplines than any previous guide on animal care and use It treats on such important subjects as The important role that the researcher and veterinarian play in developing animal protocols Methods for assessing and ensuring an animal's well being General animal care elements as they apply to neuroscience and behavioral research and common animal welfare challenges this research can pose The use of professional judgment and careful interpretation of regulations and guidelines to develop performance standards ensuring animal well being and high quality research *Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research* treats the development and evaluation of animal use protocols as a decision making process not just a decision To this end it presents the most current in depth information about the best practices for animal care and use as they pertain to the intricacies of neuroscience and behavioral research *Veterinary Medicine* ,2001 The Baboon in Biomedical Research John L. VandeBerg,Sarah Williams-Blangero,Suzette D. Tardif,2009-06-04 Nonhuman primates have played critical roles in biomedical research and they are among the few animals whose use in research continues to increase The scientific value of nonhuman primates derives from their close phylogenetic proximity to man and their consequent anatomic physiologic and genetic similarities to man Only nonhuman primates can provide adequate models for many complex physiological and disease processes of humans The baboon is a relative newcomer to the repertoire of nonhuman primates used in biomedical research However in less than 50 years since its first use in the U S it has become one of the most popular laboratory primate species It is larger than the other widely used monkey species making it advantageous for many types of experiments and technological developments It is extraordinarily hardy and highly fecund in captivity It closely resembles humans in a variety of physiological and disease processes such as cholesterol metabolism early stages of atherosclerosis and alcoholic liver disease Its chromosomes closely resemble those of humans and many genes of the two species lie in the same

chromosomal order Among all primates baboons are the most widely used models for the genetics of susceptibility to complex diseases and they are the first nonhuman primate for which a framework genetic linkage map was established In addition the baboon genome is currently being sequenced and as a result the utility of this species for biomedical research will be dramatically increased
