Missing Data Quantitative Applications In The Social Sciences:

Applied Regression Models in the Social Sciences Dudley L. Poston, Jr, Eugenia Conde, Layton M. Field, 2023-08-17
This accessible and practical textbook gives students the perfect guide to the use of regression models in testing and evaluating hypotheses dealing with social relationships. A range of statistical methods suited to a wide variety of dependent variables is explained which will allow students to read, understand and interpret complex statistical analyses of social data. Each chapter contains example applications using relevant statistical methods in both Stata and R giving students direct experience of applying their knowledge. A full suite of online resources including statistical command files, datasets and results files, homework assignments, class discussion topics, PowerPoint slides and exam questions supports the student to work independently with the data and the instructor to deliver the most effective possible course. This is the ideal textbook for advanced undergraduate and beginning graduate students taking courses in applied social statistics. Missing Data
Paul D. Allison, 2024-05-08. Sooner or later anyone who does statistical analysis runs into problems with missing data in which information for some variables is missing for some cases. Why is this a problem? Because most statistical methods presume that every case has information on all the variables to be included in the analysis. Using numerous examples and practical tips, this book offers a nontechnical explanation of the standard methods for missing data such as listwise or casewise deletion as well as two newer and better methods: maximum likelihood and multiple imputation. Anyone who has been relying on ad hoc methods that are statistically inefficient or biased will find this book a welcome and accessible solution to their problems with handling missing data. Health Care Financing Review, Impact of Traumatic Brain Injuries on Participation in Daily Life and Work: Recent Research and Future directions
Nada Andelic, Cecilie Roe, Marianne Løvstad, Anne Norup, Jennie L. Ponsford, 2020-01-16 *Scams, Cons, Frauds, and Deceptions* Sean Byrne, James Byrne, 2024-06-28. This unique volume presents cutting edge research on the nature and extent of a wide range of scams, cons, frauds and deceptive activities including sextortion, the use of ransomware, phishing, identity theft, Ponzi schemes, online shopping fraud, gift card scams and health care fraud targeting elderly victims. The contributions to this book raise and attempt to answer several intriguing questions: Why have governments in each global region failed to respond more aggressively to these crimes? What can the private sector and social media giants be doing? Can the current responses of both governments and the private sector be linked to the public's ambivalence about how to respond to these forms of offending and victimization? Does a large segment of the public admire individuals who get involved in these activities in large part due to the positive portrayal of scammers, fraudsters and con artists in both literature and cinema? Or does the public's view of the harm caused by these scams and cons vary based on our view of who is victimized, e.g. individuals or corporations and/or why they were chosen? Will governments as they have done in the past attempt to influence the public's views by restricting access to books and movies that focus on the latest scams, cons and frauds taking place on line and in person via book banning and other forms of

censuring And finally should this discussion of the influence of books and cinema on the public's views of scams frauds cons and deception be broadened to include the government's ongoing attempts to censure a wide range of books and films that may influence the public's view of morality and more recently the public's view of our government due to their content Timely and thought provoking this book will be a key resource for researchers scholars and practitioners in criminology and criminal justice sociology law psychology and social work while also appealing to interdisciplinary researchers seeking insight into the relationship between positive portrayals of scammers fraudsters and con artists in literature and cinema and the public's perception of individuals who get involved in these activities It was originally published as a special issue of

Victims Offenders *An Introduction to Multilevel Modeling Techniques* Ronald H. Heck, Scott L. Thomas, 1999-11

Multilevel modelling is a data analysis method that is frequently used to investigate hierarchical data structures in educational behavioural health and social sciences disciplines Multilevel data analysis exploits data structures that cannot be adequately investigated using single level analytic methods such as multiple regression path analysis and structural modelling This text offers a comprehensive treatment of multilevel models for univariate and multivariate outcomes It explores their similarities and differences and demonstrates why one model may be more appropriate than another given the research objectives
