

# Mitosis

How do living things grow and repair themselves?

## Why?

Living things must grow and develop. At times they suffer injuries or damage, or cells simply wear out. New cells must be formed for the organism to survive. What process must occur to make a new, properly-functioning cell?

## Model 1 – Mitosis as Part of the Cell Cycle

1. Refer to Model 1. List the four phases in the mitosis process.
2. Where is mitosis in the cell cycle? Before \_\_\_\_\_ and after \_\_\_\_\_.
3. What three phases of the cell cycle are considered **interphase**?
4. Refer to the cell cycle shown.
  - a. How many cells are present at the beginning of mitosis?
  - b. How many cells are present at the end of mitosis?

processes in nondividing cells      *The Mitotic Cycle* Arthur Frederick William Hughes, 1952      Meiosis and Mitosis Jean Brachet, Alfred E. Mirsky, 2014-05-10 The Cell Biochemistry Physiology Morphology Volume III Meiosis and Mitosis covers chapters on meiosis and mitosis The book discusses meiosis with regard to the meiotic behavior of chromosomes the anomalous meiotic behavior in organisms with localized centromeres and in forms with nonlocalized centromeres and the nature of the synaptic force The text also describes the mechanism of crossing over the relationship of chiasmata to crossing over and metaphase pairing and the reductional versus equational disjunction The process of mitosis and the physiology of cell division are also considered The book further tackles the significance of cell division and chromosomes the essential mitotic plan and its variants the preparations for mitosis and the transition period The text also demonstrates the time course of mitosis the mobilization of the mitotic apparatus metaphase the metaphase the mitotic apparatus anaphase telophase cytokinesis and the physiology of the dividing cell Physiological reproduction mitotic rhythms and experimental synchronization and the blockage and stimulation of division are also encompassed Biologists microbiologists zoologists and botanists will find the book invaluable      **Mitosis Facts and Questions** M. Little, N. Paweletz, C. Petzelt, H. Ponstingl, D. Schroeter, H.-P. Administrative Editor: Zimmermann, V. Runnström-Reio, 2012-12-06 Two years ago about twenty people gathered informally in our institute to discuss mitosis We took this opportunity to try to separate the hard facts of mitosis which are accepted by most people from the soft ones which are still open for discussion Surprisingly few hard facts survived with their reputation still intact This result led us to organize a similar meeting on a larger scale The outcome was the workshop Mitosis Facts and Questions which was held at the German Cancer Research Center in Heidelberg from April 25-29 1977 An introductory lecture was given for each of nine major topics followed by an extensive discussion of facts questions and future experiments Further details were provided by posters The proceedings of the meeting are published in this volume We feel that many open questions and facts described here will provide stimulating ideas and a basis for further investigation of this fundamental process The success of the workshop would not have been possible without the help of many people We are very grateful to the German Cancer Research Center for its interest and assistance and for the support of the Verein zur Förderung der Krebsforschung in Deutschland represented by Prof Dr h c K H Bauer the ECBO European Cell Biology Organization and the Deutsche Gesellschaft für Zellbiologie Our sincere thanks are also extended to our students and technicians for their enthusiastic help and to Mrs Joa for typing the manuscripts      **Mitosis** Andrew D. McAinsh, 2009-06-29 Made possible by the advent of modern methodology and ideal for both experienced and novice scientists this volume provides an up to date collection of approaches that can be used to investigate how the mechanism of mitosis operates at the molecular level      **Mitosis and Meiosis** Gary Parker, W. Ann Reynolds, Rex Reynolds, 1968      Mitosis/Cytokinesis Arthur Zimmerman, 2012-12-02 Mitosis Cytokinesis provides a comprehensive discussion of the various aspects of mitosis and cytokinesis as studied from different points of view by various authors The book summarizes

work at different levels of organization including phenomenological molecular genetic and structural levels The book is divided into three sections that cover the premeiotic and premitotic events mitotic mechanisms and approaches to the study of mitosis and mechanisms of cytokinesis The authors used a uniform style in presenting the concepts by including an overview of the field a main theme and a conclusion so that a broad range of biologists could understand the concepts This volume also explores the potential developments in the study of mitosis and cytokinesis providing a background and perspective into research on mitosis and cytokinesis that will be invaluable to scientists and advanced students in cell biology The book is an excellent reference for students lecturers and research professionals in cell biology molecular biology developmental biology genetics biochemistry and physiology

*Molecular Regulation of Nuclear Events in Mitosis and Meiosis* Robert A. Schlegel, Margaret S. Halleck, Potu N. Rao, 2013-09-24 Molecular Regulation of Nuclear Events in Mitosis and Meiosis presents papers from researchers in various fields engaged in the scientific study of molecular mechanisms involved in the control of nuclear events in meiotic and mitotic cell activity Various articles in the book discuss a wide range of topics such as the development of cytoplasmic activities that control chromosome cycles during maturation of amphibian oocytes dynamics of the nuclear lamina during mitosis and meiosis role of protein phosphorylation in xenopus oocyte meiotic maturation and cell cycle studies of histone modifications Molecular and cell biologists oncologists and biochemists will find the book invaluable

Structure The actuality of structural elements in the spindle Nature and origin of the spindle apparatus Hypotheses of mitosis Related problems Conclusion Optical Studies on Cell Division (Mitosis) Norman Miyamoto Baker, 2010 Mitosis is the process by which cells after having duplicated their DNA content segregate chromosomes equally into two identical daughter cells Mitosis is a very short part of a normal cell cycle usually 24 hours and ranges from 30 minutes to an hour depending on cell type and environmental conditions During this incredibly short amount of time the cell undergoes several complex re arrangements biomechanically and biochemically Microtubules 20 nm width dimer polymers play an essential role as the building blocks that provides the cytoskeleton and mitotic spindle for the cell provide the force that segregates chromosomes anaphase to satisfaction of tension and attachment based checkpoints metaphase anaphase transition To elucidate the key role microtubules have in mitosis drugs such as taxol and nocodazole have been used to impart catastrophic global damage to the mitotic spindle and study the effects on cellular division However catastrophic global damage can not answer specific questions regarding highly spatially localized damage and temporally transient damage In elucidating the role of microtubules chromosomes and other key biological structures there is the need for a transient perturbation on the mitotic process To study the effects of transient perturbation on mitosis a Laser microscope system Robolase was developed to deliver spatially localized 0.4  $\mu\text{m}$  and temporally specific disruption inside living cells nanosurgery Specifically the affect of

ablating chromosome tips mitotic spindles and chromatid are examined and the relationship between damaged sites and pathways controlling the progression of the cell cycle and DNA damage pathways are examined In conclusion an optically based method for studying mitosis with transient perturbation has been developed and used to determine that chromosome tip disruption affects cytokinetic progression prolonged disruption of mitotic spindle reveals force sensing in the metaphase spindle and double strand breaks of DNA recruit CENP A in addition to known DNA damage proteins      Looking at Chromosomes John McLeish, Brian Snoad, 1959
