Sony Alpha DSLR-A300 / A350 Digital Field Guide Tom Bonner, 2011-05-16 Spectacular photos begin with your Sony Alpha and this book With its Alpha A300 and A350 cameras Sony has blurred the distinction between introductory and advanced dSLRs With the expert advice in this book you ll learn to use every menu and control perfectly and gain insight into setting up and capturing shots that will amaze you Reach beyond the automatic settings and take control of exposure shutter speed white balance and every creative element that makes photography an art Part I explores using your Sony Alpha A300 or A350 straight out of the box Starting with an in depth look at the Sony Quick AF Live View System this part of the book also explores all the external controls explaining the purpose and function of each button dial and switch Understanding your camera s menu system is crucial to getting great results with the A300 or the A350 and of course the book will also teach you how to maneuver through all of your camera s menus You ll not only learn how to adjust each setting but when and why you should make each adjustment Chapter 3 gives a thorough explanation of basic photography fundamentals without overwhelming jargon and technical terms If you are a new photographer you will gain an appreciation of aperture shutter speed exposure ISO and white balance If you are an experienced photographer you ll find helpful tips and tricks for adjusting each of these key settings Interchangeable lenses are one of a dSLR s major strengths and that is true of both the A300 and A350 With so many lens options choosing auxiliary lenses for the A300 series can become overwhelming Chapter 4 helps you eliminate the mystery about which lenses to buy and gives you a full explanation of what to look for when evaluating a new lens With information on wide angle normal telephoto and macro lenses this chapter discusses the full Sony lens lineup and goes on to demystify the option of using Minolta lenses on the Sony Alpha Understanding light and light modifiers such as diffusers and reflectors is absolutely essential to getting great results from a dSLR In chapter 5 you ll find a complete discussion of lighting basics including the differences between continuous lighting and electronic flash The full array of light modifiers is outlined and the chapter goes on to explain the strengths and weaknesses of the proprietary Sony Minolta hot shoe design Naturally there is also a discussion of which flash units work with the A300 series Chapter 6 consists of a series of exercises designed to enhance your skills when shooting in a wide variety of photographic situations including everything from macro photography and black and white to high dynamic range portrait and travel photography Each topic is accompanied by numerous full color examples DSLR photography entails far more than just the camera and lens Once you fill your memory card with great images you will need to download catalog store and edit those images Chapter 7 takes you through a quick but informative tour of the software and hardware options available to simplify your digital workflow You will be exposed to the differences between RAW and JPEG images and you ll receive a thorough overview of your RAW processing options You also learn about sharpening and noise reduction software as well as the best editing applications Novel
Method for Measuring the Time of Death on Teeth - Based on Liquid Contents, Reflection Spectra and Colour André

Hoffmann, 2004-05-25 Knowing about the time of death is often the central key to solving criminal cases. The time of death is also relevant in cases of natural death for the family register entry for the insurance system or the succession. However, the forensic medical estimation of the time of death postmortal interval is still not without limitations, especially if it should be precise or if it cannot be done relatively immediately after onset of death. With the onset of death, various processes begin to set in place that change a corpse and its tissues over the time axis. If it were possible to find a process in a certain tissue that would behave precisely like one or better several clockworks and if it were still possible to reset the time to the state before or at the time of death, if it would also be possible that these synchronous clocks run again and if it were also possible to run the elapsed time after death in real time on the identical individual to be examined or the identical examination object under comparable conditions, simulation, the perfect and most precise method for determining the time of death would be born. The author of the present work has observed that teeth of dead appear much brighter, differently coloured and less translucent and more opaque than teeth of living people and that dental colour changes are based on reversible drying and liquid absorption processes and can be measured with high precision and very differentiated values. He revealed phenomena, paradoxes, dynamics and liquid flow and articulates the dental fingerprint for identification, tooth clock, tooth memory. He measures the loss of liquid in ranges of up to one millionth of a gram in the microgram range as well as the colour and reflection spectra with high precision measuring systems and he sees a fundamental possibility in the use of processes that he has measured and analyzed on drying and liquid absorbing teeth and he is presenting a novel method for the first time. Furthermore, for the first time he also presents a reference independent approach, perhaps the first reference independent analysis or measurement method in the natural sciences based on drying up to the time of the first measurement, liquid storage and repeated drying, the actual simulation. For this reference independent method approach, in contrast to his reference dependent method, it does not necessarily need reference values, i.e. values that had to be obtained beforehand on other comparable samples, see nomogram, but only values that were obtained previously on the identical object. For the first time, the scattering problem was circumvented, the way to a high precision method. The novel method of analyzing and measuring the time of death seems to have a number of advantages: objectifying measurement instead of subjective estimations of stages, several independent values such as L, a, b, C, h, M spectral values instead of just one numerical value, temperature in degrees in the case of the body cooling method, reversibility instead of irreversibility of the processes and thus, after sufficient liquid storage, repeatability of the post mortem conditions and consequently the post mortem interval up to the first measurement in the context of a simulation under comparable conditions on the identical object and thus, avoidance of the scattering problem, avoidance of intra and inter individual differences on both sides of the autopsy table for the estimating and for the estimated individual time of death, measurement on site or high precision measurements with high precision positioning systems instead of measurement with thermometers. In the author's vision, comfortable measurements of

various samples independently of one another within an automatic analyzer simulating ambient conditions in the laboratory instead A breakthrough **The Complete Guide to Sony's Alpha 700 DSLR (B&W Edition)** Gary Friedman,

Agronomic Crops Mirza Hasanuzzaman,2019-11-23 Agronomic crops have provided food beverages fodder fuel medicine and industrial raw materials since the beginning of human civilization More recently agronomic crops have been cultivated using scientific rather than traditional methods However in the current era of climate change agronomic crops are suffering from different environmental stresses that result in substantial yield loss To meet the food demands of the ever increasing global population new technologies and management practices are being adopted to boost yields and maintain productivity under both normal and adverse conditions Further in the context of sustainable agronomic crop production scientists are adopting new approaches such as varietal development soil management nutrient and water management and pest management Researchers have also made remarkable advances in developing stress tolerance in crops However the search for appropriate solutions for optimal production to meet the increasing food demand is still ongoing Although there are several publications on the recent advances in these areas there are few comprehensive resources available covering all of the recent topics This timely book examines all aspects of production technologies management practices and stress tolerance of agronomic crops The Complete Guide to Sony's Alpha 300 and 350 Digital SLR Cameras Gary L.

coordinates comparisons All these influencing factors are investigated on moist drying drier various specific dehydration and rehydration states and dry teeth based on the brightness L on colour measurement values such as a b CIELAB C h CIELCH E on the metamerism index on spectral values and curves tabs of dental shade guides and on tooth colour spaces As part of this exploration phenomena e g changes and breaks in behaviour as well as highly individual developments in colour values paradoxes between the values of subjective determination using shade guides and the values of objective measurements were identified and insights into the very complex colour dynamics through dehydration and rehydration were shown up to more than 8 days The development of the individual colour measurement values was based on the liquid flow through the tooth and its tissues in particular during drying and rehydration and gave information about dynamics and the temporal extent of these processes On the basis of this data Hoffmann had developed several methods for research and practice suggestions for feasible innovations such as monitoring of dental treatment to protect against pulp damage based on drying and reconstructing the colour of naturally moist teeth on those that have already dried the identification of the living and the dead human and animals via the dental fingerprint and a novel method of measuring the time of death for forensic medicine He also described a time limit of drying up to which relatively natural suitable colour values and shade matching results can be obtained and after which no colour determination should be carried out and he established the rehydration time after the end of the drying or dental treatment which must be waited in order to regain a natural tooth colour and to get correct values and results again His findings also show that teeth are able to store information on for example the condition liquid content colour values and the time within the drying and liquid re absorption chronology The author articulates a dental chronometer tooth clock dental data store tooth data store and a dental memory tooth memory and believes that significant progress in this field may include and could be achieved via a neural network for colour measurement apparatus A book for anyone interested in the natural sciences Popular Photography ,1983-07 **Popular Mechanics** ,1991-01 Popular Mechanics inspires instructs and influences readers to help them master the modern world Whether it s practical DIY home improvement tips gadgets and digital technology information on the newest cars or the latest breakthroughs in science PM is the ultimate guide to our high tech lifestyle **Popular Photography** ,1994-06 **Popular Photography** ,1995-10
