Minority Citizens In Disasters Minority Citizens In Disasters:

Minority Citizens in Disasters Ronald W. Perry, Alvin H. Mushkatel, 2008-03-01 The first study of its kind to address the issue of ethnic diversity *Minority Citizens in Disasters* focuses on the responses of two minorities blacks and Mexican Americans relative to whites in three disaster events a propane car derailment a nitric acid spill and a flood Ronald Perry and Alvin Mushkatel find that response to initial warnings is influenced by the source of the information mass media public authorities or family and friends and by the immediacy of the danger a group's familiarity with the type of threat and the cause of the disaster Though social contacts were most often the source of warning public authorities were the most trusted and reliable The mass media usually considered an unreliable source proved an effective means for reaching a majority of Mexican Americans who often tuned in to Spanish language stations Blacks however tended to dismiss the media as a vehicle controlled by whites and covering primarily white concerns while whites often dismissed news stories as mere media productions Perry and Mushkatel's record of the responses of blacks Mexican Americans and whites not only reveals the differing social configurations of minority and majority groups but more important suggests concrete ways to modify and improve emergency management systems

At Risk Piers Blaikie, Terry Cannon, Ian Davis, Ben Wisner, 2014-01-21 The term natural disaster is often used to refer to natural events such as earthquakes hurricanes or floods However the phrase natural disaster suggests an uncritical acceptance of a deeply engrained ideological and cultural myth At Risk questions this myth and argues that extreme natural events are not disasters until a vulnerable group of people is exposed The updated new edition confronts a further ten years of ever more expensive and deadly disasters and discusses disaster not as an aberration but as a signal failure of mainstream development Two analytical models are provided as tools for understanding vulnerability One links remote and distant root causes to unsafe conditions in a progression of vulnerability The other uses the concepts of access and livelihood to understand why some households are more vulnerable than others Examining key natural events and incorporating strategies to create a safer world this revised edition is an important resource for those involved in the fields of environment and development studies
