**Exploring the Role of Social Media in Health Promotion** Michael Stellefson,J. Don Chaney,Beth H. Chaney,Samantha R. Paige,2020-06-18 The use of social media in public health education promotion has been increasing due

in part to its ability to remove physical access and geographical barriers for users. Specifically, social media provides an outlet to increase and promote translational health communication strategies and the effective dissemination of health information and data in ways that allow users to not only utilize but also to create and share pertinent health information. Although social media applications in public health and health promotion have yielded success in terms of generating support structures and networks for effective health behavior change, there are challenges and complications associated with use of social media that also need to be addressed, e.g., managing misinformation, ensuring compliance with privacy protection regulations. This Special Issue aims to explore social media as a translational health promotion tool by bridging principles of health education and health communication. Broadly, this Special Issue is seeking original submissions that examine 1) the method with which social media users access, negotiate, and create health information that is both actionable and impactful for diverse audiences; 2) strategies for overcoming challenges to using social media in health promotion; and 3) best practices for designing, implementing, and/or evaluating social media campaigns and forums in public health. Special interest will be given to innovative submissions that expand and build upon traditional health education approaches with health communication theories and models. Other manuscript types of interest include relevant position papers, brief reports, and commentaries.

**Intelligent Video Surveillance** Antonio Neves, 2019. The goal of intelligent video surveillance systems is to efficiently extract useful information from a considerable number of videos collected by surveillance cameras by automatically detecting, tracking, and recognizing objects of interest and understanding and analyzing their activities. Video surveillance has a huge amount of applications from public to private places. These applications require monitoring indoor and outdoor scenes. Nowadays, there are a considerable number of digital surveillance cameras collecting a huge amount of data on a daily basis. Researchers are urged to develop intelligent systems to efficiently extract and visualize useful information from this big data source. The exponential effort on the development of new algorithms and systems for video surveillance is confirmed by the amount of effort invested in projects and companies, the creation of new startups worldwide, and not less important, in the quantity and quality of the manuscripts published in a considerable number of journals and conferences worldwide. This book is an outcome of research done by several researchers who have highly contributed to the field of Video Surveillance. The main goal is to present recent advances in this important topic for the Image Processing community.
